I.1. CONSONANTS

I.1.1. 'ALEF אֵלֶף (א)

Glottal plosive [?]

Consonantal 'alef occurs in the following contexts:

In the onset of a syllable at the beginning of a word, e.g. [?כ:ˈma:aṣ] 'he said' (Gen. 3.16), אֱלֹהֵים [?ɛloːˈhiːim] 'God' (Gen. 1.1).

In the onset of a syllable in the middle of a word after a silent *shewa*, e.g. וַיִּבְאָשׁ [vaɟjivˈʔa:aʃ] 'and it became foul' (Exod. 7.21).

In the onset of a syllable in the middle of a word after a vowel, a hatef vowel or vocalic shewa, e.g. יְבֵיאוּ [jɔːˈviːʔuː] 'they bring' (Exod. 16.5), אַאַוֶּרְדּ [ʔaʔazzerˤ¹χɔː] 'I gird you' (Isa. 45.5) מַאַד [moˈʔoːoð] 'very' (Gen. 1.31).

In the coda of a syllable in the middle of a word, e.g. יַּאָסָר [vaֈֈɛʔˈsoːorˁ] 'and he tied' (Gen. 46.29).

In the Standard Tiberian tradition consonantal 'alef in the middle of a word between vowels is marked with dagesh in four places:

- (i) וַיבִיאוּ לְּוֹ 'and they brought to him' (Gen. 43.26)
- (ii) יֵיבֹריאוּ לְינוּ (and they brought to us' (Ezra 8.18)
- (iii) תַּבִיאוּ (you shall bring bread' (Lev. 23.17)

(iv) לא ראו 'they were not seen' (Job 33.21)

These four cases are specified in Masoretic treatises and Masoretic notes. They are referred to, for example, in the Masoretic treatise *Hidāyat al-Qāri*²:1

It has been said that *dagesh* is placed in *`alef* in some specific places in Scripture, namely in the following four cases: יְיָבִיאוּ לָּוֹ אֶת־הַמִּנְחֶה 'and they brought him the present' (Gen. 43.26), יַיִבִיאוּ לְנוּ בְּיַד־אֱלֹהֵינוּ 'and they brought to us by the hand of our God' (Ezra 8.18), וְיַבְּיאוּ לְנוּ בְּיַד־אֱלֹהֵינוּ (from you dwellings you shall bring' (Lev. 23.17), וְשַׁבְּוֹ עַצְמוֹהְיוֹ לְא 'and his bones, which were not seen, are laid bare' (Job 33.21).

Some examples of references to the four places in Masoretic notes include the following:

ג׳ אלפין דגשין בלישנא וסימנהון ממושבתיכם תבטאו לחם תנופה, יביאו לו את המנחה אשר בידם, ויביאו לנו, וחד בלשו׳ אחר ושפו עצמותיו לא ראו

There are three occurrences of 'alef with dagesh in a particular lexical item (viz. derivatives of the root בוא 'to come'), these being in the verses מְמוֹשְׁבֹּתֵיכֶׁם תְּבִיאוּן לֵחֶם 'You shall bring from your dwellings two loaves of bread to be waved' (Lev. 23.17), וַיָּבִיאוּ לָּוֹ אֶת־הַמְּנְחֶה אֲשֶׁר־ 'they brought to him the present which they had in their hand' (Gen. 43.26), וַיְּבִיאוּ לְינוּ 'they brought to us' (Ezra 8.18), and one (case of 'alef with dagesh) in another word,

¹ Long version, edition in vol. 2 of this book, §II.L.1.3.2.

(in the verse) וְשֶׁפְּוּ עַׁצְמוֹהָיזי לָא רָאָוּ 'and his bones which were not seen stick out' (Job 33.21).²

חד מז ד' אלפיז דגשיז בקרי'

One of four 'alefs with dagesh in Scripture.3

These show that the occurrence of *dagesh* in 'alef in these specific places was fixed in the Tiberian tradition. In some of the early Standard Tiberian codices, however, *dagesh* is marked in 'alef also elsewhere in addition to these canonical four places. This applies even to L, where it occurs in the following two additional places:⁴

- L: Ruth 2.10: וְאָנֹכֵי 'and I' (A: וְאָנֹכֵי)
- L: Ruth 2.11: וַתְּעַזְבִּי אֶבְיךְ 'and you left your father' (A: וַתַּעַזְבִּי (A: אַבִיךּ

These two additional occurrences of *dagesh* in 'alef in L are not referred to in the Masoretic notes, which indicates that they were not canonical in the Tiberian tradition. In the manuscript C there are numerous additional cases of 'alef marked with *dagesh*, none of which are referred to in the Masoretic notes (Yeivin 1980, 285), e.g.

C: Hag. 1.1: שְׁאַלְתִּיאֵל 'Shealtiel' (L [BHS]: שְׁאַלְתִּיאֵל)

² Ginsburg (1880, §5), source: Masora magna in British Library, Harley 1528 (fourteenth century, Spain).

³ Ginsburg (1905, 2), source: Masora magna in the Second Rabbinic Bible (Venice 1516–17, Bomberg) to Lev. 23.17, Job 33.21 and Ezra 8.18.

 $^{^{\}rm 4}$ I am grateful to Ben Kantor for drawing these to my attention.

- C: Jer. 38.12: בָּלוֹאֵי 'rags' (L [BHS]: בָּלוֹאֵי)
- C: Isa. 51.19: קְרְאֹתִּידְּ 'the things that befall you' (L [BHS]: קְרָאֹתִידָּ

Ginsburg (1905, 2) draws attention to the existence of some Masoretic notes in European manuscripts that refer to a greater number of instances of *dagesh* in *'alef* than the canonical four. These must reflect the awareness of a greater extent of marking the *dagesh* in some manuscripts.

In manuscripts with Non-Standard Tiberian vocalization, the marking of dagesh in consonantal 'alef is very frequent. In the Codex Reuchlinianus this is the general rule with only a minority of exceptions. In the single verse Isa. 37.33, for instance, we find: סל האב 'to' (L [BHS]: אָלָר 'to' (L [BHS]: אָלֶר 'Assyria' (L [BHS]: אָלֶר (Morag 1959, 218). There is frequent marking of dagesh in 'alef also in manuscripts with Non-Standard Tiberian manuscripts written in the Middle East. In some of the Genizah fragments described by Blapp (2017), for example, the marking is as regular as in Codex Reuchlinianus. The following are a few selected examples from T-S A12.1 (Blapp 2017, 83):

```
אָמָה (T-S A12.1 | L [BHS]: אָמָה Prov. 29.15 'his mother') אַשְּרֵהוּ (T-S A12.1 | L [BHS]: אַשְּרֵהוּ Prov. 29.18 'happy is he') אָץ (T-S A12.1 | L [BHS]: אָץ Prov. 29.20 'he who is hasty') בָּאֲכֶּת (T-S A12.1 | L [BHS]: בַּאֲמֶת Prov. 29.14 'truthfully') הַאָּלִּת (T-S A12.1 | L [BHS]: בְּאָמָת (T-S A12.1 | L [BHS]: יראוּ רוֹבּיי יראוּ (T-S A12.1 | L [BHS]: יראוּ
```

קּאֵין (T-S A12.1 | L [BHS]: בְּאֵין Prov. 29.18 'where there is not')

The motivation to mark the dagesh in the four canonical places in the Standard Tiberian tradition was, it seems, to ensure that the consonantal 'alef was pronounced correctly and was not slurred over (Yeivin 1978, 1980, 285). The forms וַיָּבִיאוּ לִוֹ (Gen. 43.26), תַביאוּן לָנו (Ezra 8.18) and תַביאוּן לָנו (Lev. 23.17) are distinguished from other instances of similar forms of this verb in the biblical corpus by having a conjunctive accent followed by a word with an accent on the initial syllable. This is the context in which dehig occurs when the final vowel of the first word is games or segol, in which there is a fast reading and compression of the syllable between the two accents (§I.I.2.8.1.2.). They also exhibit the sequence of two adjacent high vowels [i:—u:] separated by 'alef. It is likely, therefore, that the consonantal 'alef was considered to be particularly in danger of being slurred over in such a context. Another common feature of these three cases is the occurrence of the sonorant consonant lamed at the beginning of the second word. The 'alef in ראו (Job 33.21) was evidently considered to be in danger of losing its pronunciation and being read as a glide between the two high [u:] vowels.

The greater number of occurrences of *dagesh* in 'alef in some of the model Tiberian codices, especially C, reflects the extension of this principle to other cases of consonantal 'alef that were considered to be at risk of being misread. Still further extension of this practice is found in some manuscripts with Non-Standard Tiberian vocalization, in which the marking of *dagesh* has become virtually regular.

The question arises as to whether this *dagesh* in 'alef marked gemination or not. Some modern scholars have interpreted it as a sign to distinguish the consonantal realization of the 'alef from cases where it does not have consonantal realization (e.g. Morag 1959, 218–19, 1960, 208 n.6, 1963, 5–6). It would, therefore, be equivalent to a *mappiq* on the letter *he*, which distinguishes final consonantal *he* from final *he* that is a vowel letter, rather than a marker of gemination. A statement in *Hidāyat al-Qāri*' appears to support this interpretation:

If it were said: Surely the *dagesh* in some of the four letters of this place (i.e. the letters אהחע), namely in the 'alef in the four passages that you have just mentioned, disproves your statement that *dagesh* is not put on the letters of this place of articulation, the response would be: If one examines carefully the so-called *dagesh* in the 'alef in these four passages, one sees that it is not *dagesh*, since the speaker strives to introduce heaviness into it, but it is not made heavy.⁵

There is, however, evidence for the gemination of the 'alef in some early Karaite sources. Yūsuf ibn Nūḥ, a Karaite scholar active in the second half of the tenth century, in his grammatical commentary known as the *Diqduq* compares the *dagesh* in the forms יָּיִבְיאוּ לְנוֹ (Gen. 43.26) and יַיִּבְיאוּ לְנוֹ (Ezra 8.18) to the *dagesh* that occurs in other forms due to the preceding stress:

וּ הְּהָתְלוּ בְּוֹ (Job 13.9): ... The *dagesh* that occurs in the *lamed* has arisen due to the fact that the stress lengthens (the syllable beginning with) the *tav*, resulting in יעסע.

⁵ Long version, edition in vol. 2 of this book, §II.L.1.3.5.

deceive him'. This conforms to what we have stated before, with regard to the occurrence of *dagesh* in some places when the stress lengthens what precedes, for example אָל־ 'to Moses saying' (Exod. 6.10), מֹשֶׁה לֵּאמְר 'to Moses saying' (Exod. 6.10), וַיְבִּיאוּ 'to Moses saying' (Exod. 6.10), וַיְבִיאוּ 'to Moses saying' (Exod. 6.10), וַיְבִיאוּ (Ezra 8.18) and נַיְּבִיאוּ (Gen. 43.26). The word וְיִבִּיאוּ is like אָהָתֵלוּ (Gen. 43.26). The word יְּבִיאוּ is like אָהָתֵלוּ (The stress and the *dagesh* occur within the same word.

This passage implies that the *dagesh* in the *'alef* indicates gemination in the same way as the *dagesh* in הְּהָתֵלוּ. Ibn Nūḥ makes the following statement about the form (Job 33.21):

The imperative of this is רָאֵה, like בָּסֶה and שָּבֶּה. 7

In Ibn Nūḥ's system of grammar, the imperative form is the morphological base of derivations. This statement indicates that אָם has the morphological base רָאֵה and that this has the same pattern as יָבֶּפֶה which are the bases of the forms יְבֶּפֶה 'it is covered' (Ecc. 6.4), וְשֶׁפָּוּ 'and they stick out' (Job 33.21) with medial gemination.

In a Karaite transcription of לָא רָאָן (Job 33.21) into Arabic script, an Arabic *shadda* sign is written over the *'alif* that transcribes the *'alef* with the *dagesh*:

⁶ תהתלו בו: ... ואלדגש אלדי וקע פי אללאם הו מן גהה אנה מד אלטעם פי תָּו כֹק תַּהְתֵּלוּ בו: והו כמא קלנא אנה יעמל פי בעץ אלמואצע דגש ענד מא ימֻד אלטעם פי מא תְּהָתֵלוּ בו: והו כמא קלנא אנה יעמל פי בעץ אלמואצע דגש ענד מא ימֻד אלטעם פי מא תַּהְתֵלוּ מתל וַיָּבְיאוּ צאר ויאמְרוּ לֹא: ויבִּיאוּ לְנוּ: וַיְּבִיאוּ לוֹ קבלה נטיר אל משֶה לֵאמֹר: Diqduq (ed. Khan 2000b, 369).

 $^{^{7}}$ אמרה ראָה מתל כַּסֶה שָּבָּה, *Diqduq* (ed. Khan 2000b, 399).

לֻׁלְּ (BL Or 2552 fol. 51r, 1 | L [BHS]: רָאָוּ Job. 33.21 'they were [not] seen')

This manuscript, which is datable to the tenth or eleventh century, elsewhere uses the *shadda* sign only to mark *dagesh forte*. This is clear evidence, therefore, that the 'alef was being read as geminate.

The interpretation of the *dagesh* in 'alef as a marker of gemination rather than a *mappiq* is reflected also by a statement in a Hebrew Masoretic treatise:

Moreover, three of the four (i.e. the four letters אהחע) have a single fixed type (of pronunciation), which is less than all the (other) letters, (namely) העח are deprived of taking dagesh.⁸

The implication of the passage is that 'alef, unlike the other guttural letters, does indeed take *dagesh*.

Returning to the passage from *Hidāyat al-Qāri*' cited above, a close reading of this reveals that the author is not saying that the point in the 'alef is simply a mappiq indicating consonantal realization. Rather the reader 'strives to introduce heaviness into

⁸ ועוד שלשה מן הארבעה, דרך אחד להם קבועה, מכל האותיות גרועה, הע"ח מן הארבעה ועוד שלשה (Baer and Strack 1879, 5).

it, but it is not made heavy', i.e. the reader intends to read it as a *dagesh forte*, but the muscular tension normally associated with *dagesh forte* is not achieved due to its articulation in the larynx. The articulation of the 'alef could, nevertheless, have been held for a longer duration.

In some manuscripts with Babylonian vocalization, the *dagesh* sign is marked on consonantal '*alef* in a wide variety of words (Yeivin 1985, 265–66). It is significant that *mappiq* on final *he* is represented by a different sign (Yeivin 1985, 335–36), suggesting that the *dagesh* in the '*alef* did not have the function simply of *mappiq* but rather indicated gemination.

In some of the reading traditions that have continued down to modern times in Jewish communities in the Middle East, the 'alef with dagesh in the four canonical places is indeed still read as a geminate 'alef, e.g. Aleppo (Katz 1981, 16), Baghdad (Morag 1977, 14), Yemen (Morag 1963, 5–6). Transcriptions of the Aleppo tradition, following Katz (1981, 16) are as follows:

Gen. 43.26: [ˌvajjaˈβiʔˈʔu]

Ezra 8.18: [v^aja βi:?,?u]

Lev. 23.17: [ta'βi?'?u]

Job 33.21: [ˈruʔˈʔu]

These traditions of reading the 'alefs need not be interpreted as late interpretations of the point in the 'alef, as Morag (1977, 14) argues, but rather continuities of medieval traditions.

In sum, the weight of evidence suggests that the *dagesh* point in 'alef in the four canonical places in the Standard Tiberian

tradition indicated gemination of the 'alef, and so should be transcribed [vajjo:'vi:i??u:], [tho:'vi:i??u:], [Ru?'?u:]. The gemination was an orthoepic strategy that involved pronouncing the 'alef with additional effort to ensure that it was not slurred over.

Within the Tiberian Masoretic tradition there are a number of pairs of identical lexical words, many of them in parallel passages, one of which has preserved the consonantal 'alef whilst the other has lost it both in the *ketiv* and in the *qere*, 9 e.g.

```
תוֹמֶם (Gen. 25.24) — תְּאוֹמֶים (Gen. 38.27) 'twins'
```

ופַוָּה (Gen. 46.13) — ופוּאָה (1 Chron. 7.1) 'and Puah'¹⁰

וַתְּאָזְרֵנִי (2 Sam. 22.40) — וַתְּאַזְרֵנִי (Psa. 18.40) 'you did gird me'

הַבְּלְתִי (1 Chron. 11.39) — הַבְּאָרוֹתִי (2 Sam. 23.37) 'of Beeroth'

לַהְשֶׁוֹת (Isa. 37.26) 'to cause to crash into ruins'

וְיְרַפּֿוּ (Jer. 8.11) — וְיְרַפּֿאוֹ (Jer. 6.14) 'and they have healed'

In some biblical scrolls from Qumran, an 'alef that is pronounced consonantal in the Tiberian Masoretic tradition is omitted in the orthography, indicating that it had lost its consonantal

⁹ These are listed in the Masora, e.g. Ginsburg (1880, §16a).

¹⁰ In the Non-Standard Tiberian manuscript BL Add MS 21161, fol. 250v this word is vocalized וּפַֿוְּאֵה, which appears to be a hybrid form of מַנָּה and פּנָּאָה.

pronunciation. This is particularly common in the scroll 1QIsa^a, but is found also occasionally elsewhere, e.g.¹¹

```
משריך (1QIsa<sup>a</sup> 3.17 | L [BHS]: מָאֶטְבֶּים Isa. 3.12 'your guides') נספּים (1QIsa<sup>a</sup> 11.14 | L [BHS]: נֵאֶסְבִּים Isa. 13.4 'gathered [mpl]')

וו (1QIsa<sup>a</sup> 12.23 | L [BHS]: וְמֶלְאָוּ Isa. 14.21 'and [the surface of the world] will be filled')

וו (1QIsa<sup>a</sup> 19.3 | L [BHS]: וישמו Isa. 24.6 '[and its inhabitants] pay the penalty')

וו (1QIsa<sup>a</sup> 33.11 | L [BHS]: מָלָאִים Isa. 40.11 'lambs')

וו (1QIsa<sup>a</sup> 33.11 | L [BHS]: תְּמֶנְהָוֹי Isa. 36.16 'his fig tree')

וו (1QIsa<sup>a</sup> 13.19 | L [BHS]: אביו וו (1QIsa<sup>a</sup> 13.19 | L [BHS]: אביו וו (1QIsa<sup>a</sup> 13.19 | L [BHS]: אליב וו (4Q141 f1i.12 | L [BHS]: אַלִּיבְּבֹי וּ Deut. 32.17 'they came')

וו (4Q141 f1i.12 | L [BHS]: אַלִּיבְּבֹי וּ Joel 1.16 'Eliab')

וו (4Q78 f10–12.7 | L [BHS]: הַּבְּיִי וּ Hos. 2.2 'the earth')
```

In living reading traditions that have survived down to modern times in Jewish communities in the Middle East a consonantal 'alef is general pronounced, but is sometimes elided, especially between vowels, e.g.

¹¹ Data supplied by Aaron Hornkohl.

Aleppo

ha'ele (Katz 1981, 15 | L [BHS]: הַאֶּׁלֶה Gen. 48.1 'these')

Baghdad

wearba'Sım (Morag 1977, 13 | L [BHS]: וְאַרְבָּעֶים Gen. 47.28 'and forty')

Yemen

b°ס'hi:w (Morag 1963, 3 | L [BHS]: בְּאָחָיו Isa. 19.2 'against his brother')

Morocco

isra'il (Akun 2010, 65 | L [BHS]: ישֶׁרָאֵל Exod. 14.30 'Israel')

The variants within the Masoretic tradition and the loss of 'alef in the Qumran scrolls and modern living traditions reflect the vulnerability of consonantal 'alef to weakening in reading traditions, which would have motivated orthoepic measures being taken to ensure their correct reading.

In the model Standard Tiberian manuscripts 'alef that does not have a consonantal realization is sometimes marked with a *rafe* sign, e.g.

- L: רֹאַשִּׁי 'my head' (Psa. 40.13)
- L: לְא יָרֵיאֿנוּ 'we do not fear' (Hos. 10.3)

It is regularly marked in L on 'alef between two vowels that is not read as consonantal, e.g.

- L: פּֿתָאֹיֵם (Psa. 116.6) 'the simple'

L: וְכִּצְבַּאֹיֵם (1 Chron. 12.9) 'and like gazelles'

These words are listed in the Masora as cases where ''alef is written but not read'. 12

In some manuscripts with Non-Standard Tiberian vocalization the marking of *rafe* on non-consonantal *'alef* is very frequent, e.g.

Codex Reuchlinianus:

```
מַשֶּׂא (Morag 1959, 218 | L [BHS]: מַשֶּׂא Isa. 23.1 'oracle') מַשֶּׂא (Morag 1959, 221 | L [BHS]: יָבוֹא Isa. 37.33 '(does not) come')
```

Genizah manuscripts

```
קּאָּבֶּה (T-S A11.1 | L [BHS]: הֲיָאֹבֶה Job 39.9 'will it be willing') (Blapp 2017, 59)
```

שּׁוֹנֵאַ (T-S A12.1 | L [BHS]: שׁוֹנֵא Prov. 29.24 'he who hates') (Blapp 2017, 99)

אַלָּא (T-S A12.1 | L [BHS]: וְלָא Prov. 29.24 'and not') (Blapp 2017, 99)

In Non-Standard Tiberian manuscripts, 'alefs that are non-consonantal in the Standard Tiberian tradition are occasionally marked with *dagesh*. In some cases where the 'alef occurs word-internally, it is possible that these reflect consonantal readings of the 'alef, e.g.

אַפֿאָים (BL Add MS 21161, fol. 160v | L [BHS]: שְׁבָּאִים Psa. 104.12 'branches')

¹² Ginsburg (1880, §13).

יַשְּׁמְעָאַל (Codex Reuchlianus | L [BHS]: יִשְּׁמְעָאַל Jer. 40.14 'Ishmael')

It is sporadically, however, marked on a word-final 'alef, which must have been read as non-consonantal, e.g.

หมู (T-S NS 248.2, Arrant 2020 | L [BHS]: หมู Gen. 13.9 'please')

וַיְשָׂא (T-S NS 248.2, Arrant 2020 | L [BHS]: יַיְשָׂא Gen. 13.10 'and he lifted')

תִּירֵא (T-S NS 248.2, Arrant 2020 | L [BHS]: תִּירֶא Gen. 15.1 '[do not] be afraid')

In a few model Tiberian codices a rafe is marked on an ${}^{2}alef$ in the word יִשְׂרָאֵל where it would be expected to be consonantal, e.g.

C: בִּישֶׂרָאֵל, L [BHS]: בִּישֶׂרָאֵל 'in Israel' (1 Sam. 3.11)

Yeivin (1978, 226) suggests that this phenomenon in the model manuscripts may indicate that in this proper name the 'alef was not pronounced as consonantal, i.e. [jisr'ɔː'eːel].¹³

The marking of *rafe* on consonantal 'alef is attested sporadically also in manuscripts with Non-Standard Tiberian vocalization, e.g.

אַּנֿבִּי (T-S A12.1, Blapp 2017, 99 | L [BHS]: אֶנֹבֶי Prov. 30.2 'I')

¹³ A possible parallel to this elision of the 'alef can be identified in the proper name לְּבִיֵּאל [dɔ:niɟje:el] 'Daniel' $< *d\bar{a}n\bar{i}-2\bar{e}l$. Yeivin notes that in both names the 'alef is followed by the letter lamed.

יָּקְרְאִיֿ (T-S A13.20, Blapp 2017, 174 | L [BHS]: בְּקְרְאִיֿ Psa. 69.4 'with my crying')

In Non-Standard Tiberian manuscripts that otherwise use *dagesh* extensively in consonantal 'alef, the 'alef in the word ישראל is often marked with *rafe* (Pilocane 2004, 28).

In Biblical manuscripts with Palestinian vocalization, both the *dagesh* sign (\mathring{a}) and the *rafe* sign (\mathring{a}) are found marked on consonantal 3 *alef*, e.g.

Dagesh:

[า]พัพ (Bod. Heb. e 30 ff. 48-49 | L [BHS]: พุ่พั Isa. 6.11 'they lie waste') (Kahle 1901, 278; Revell 1970a, 77)

Rafe:

[1] וֹבּאנּ (Bod. Heb. e 30 ff. 48-49 | L [BHS]: וָבָּאוּ Isa. 45.20 'and come') (Kahle 1901, 287; Revell 1970a, 77–78)

It is unlikely that in these cases the marking of the *rafe* reflects the loss of consonantal value of the 'alef. The sign is likely to be intended to signal that the 'alef is consonantal but ungeminated.

In L one encounters vocalizations such as the following:

Num. 26.7: הָרְאוּבֵנִי (BHS: הָרֵאוּבֵנֵי) 'the Reubenite' (B: הָרֵאוּבַנִי, S: הַרְאוּבַנִי)

Josh. 12.6: לָרֻאּוּבֵני' (BHS: לָרֶאוּבֵני') 'to the Reubenite' (A: לרֹאּוּבֵני')

2 Kings 10.33: וְהָרָאּוֹבֵנִי (BHS: וְהְרָאּוֹבֵנִי) 'and the Reubenite' (A: וְהָרְאּוּבֵנִי)

Job 31.7: מָאוִם (BHS: מָאִוּם) 'blemish' (A: מְאַוּם)

Dan. 1.4: מָאוֹם (BHS: מָאוֹם) 'blemish' (qere note: מום)

The way these words appear in BHS, which does not mark rafe, would lead one to believe that the 'alef in L is a consonantal 'alef between two vowels. In the manuscripts the 'alef is marked with rafe and in manuscripts other than L there is only one vocalization sign, either qibbuş before the 'alef or a shureq dot on the vav, indicating that the 'alef did not have a consonantal realization. The vocalization in L adds a qibbuş sign on the letter preceding the 'alef. This is, therefore, a double marking of the u vowel that follows the consonant. The words should be read [hɔ:ʀu:ve:'ni:], [mu:um], 'a shown by other model manuscripts, and also by the qere note in Dan. 1.4. The double marking and qere note were strategies to ensure that the u vowel was pronounced immediately after the consonant.

I.1.2. BET בית (ב)

Bet with dagesh (1): voiced bilabial stop [b]

Bet without dagesh (\bar{a}): voiced labio-dental fricative [v]

A *bet* without *dagesh* is frequently, but not regularly, marked by the *rafe* sign in the model Standard Tiberian codices.

According to $Hid\bar{a}yat\ al\ Q\bar{a}ri'$, the Tiberians called this letter by the name ' 15 This form of the name is also found in

 $^{^{14}}$ The second [u] is an epenthetic, which is inserted after the long vowel in CVVC syllables (§I.2.4.).

¹⁵ Long version, edition in vol. 2 of this book, §II.L.1.1.2.

other Masoretic treatises, sometimes vocalized \Box , ¹⁶ and the later recensions of *Hidāyat al-Qāri*, ¹⁷ It is referred to in Masoretic treatises also as \Box . ¹⁸ Both of these spellings represent the Arabic name of the letter, viz. $b\bar{a}$, which is pronounced $b\bar{e}$ due to ' $im\bar{a}la$ in Arabic dialects (Nöldeke 1910, 131). This form of the name is found in some versions of *Sefer Yesira*. ¹⁹

It is stated in $Hid\bar{a}yat\ al\text{-}Q\bar{a}ri^{\flat}$ that the bet with dagesh is pronounced by closing the lips firmly. In the Karaite transcriptions it is represented by Arabic $b\bar{a}^{\flat}$ (Khan 1990a, 4, 2013).

According to $Hid\bar{a}yat\ al\text{-}Q\bar{a}ri^{2}$, bet with rafe is pronounced by closing the lips lightly. Taken by itself, this could be a description of a bilabial articulation of $bet\ rafe$. This is not confirmed, however, by other sources. The light closure of the lips would have accompanied a labio-dental articulation, and no doubt it is this secondary feature that the author refers to. ²¹ Elsewhere in the $Hid\bar{a}yat\ al\text{-}Q\bar{a}ri^{2}$ it is stated that $bet\ rafe$ and consonantal vav have the same pronunciation:

¹⁶ Allony and Yeivin eds. (1985, 96), Baer and Strack (1879, 7, §6)

¹⁷ Arabic version of *Maḥberet ha-Tijān* (ed. Neubauer 1891, 10), Hebrew version of *Maḥberet ha-Tijān* (ed. J. Derenbourg 1871, 36).

¹⁸ E.g. *Hidāyat al-Qāri*³ Long version, edition in vol. 2 of this book, §II.L.1.1.1., §II.L.1.1.2.; the treatise on the *shewa* edited by Levy (1936, 12).

¹⁹ Eg. ed. Hayman (2004, 51).

²⁰ Long version, edition in vol. 2 of this book, §II.L.1.3.9. Eldar (1980, fols. 10b-11a, lines 84-88).

²¹ Cf. Eldar's (1980) commentary to this passage, n.75.

'Every [consonantal] *vav* at the end of a word is pronounced, according to the Palestinians, with [the pronunciation of] *bet rafe*.'²²

This feature is alluded to also in a Masoretic treatise on the *shewa*:

'Know that every *vav* which is prefixed to the beginning of a word and has *shewa* is read with (the pronunciation of) *bet.* ... I mean, it is pronounced as if it were the letter *bet*, as in ... אמכר "and he shall say." and

In some Karaite transcriptions into Arabic script, a fricative *bet* is occasionally transcribed by Arabic $w\bar{a}w$ and, vice versa, a Hebrew consonantal vav is sometimes transcribed by Arabic $b\bar{a}$. This is a reflection of the fact that the two sounds were the same, e.g. in the manuscript BL Or 2548:

(BL Or 2548 fol. 3r, 10 | L [BHS]: עַנְבֶּים Isa. 5.4 'grapes')

وقوبي (BL Or 2548 fol. 42r, 3 | L [BHS]: إج آني Isa. 40.31 'those who are hoping for')

We know from David ben Abraham al-Fāsī that in Palestine consonantal *vav* in these circumstances was pronounced as a

²² Long version, edition in vol. 2 of this book, §II.L.1.7.7. Eldar (1984b, Hebrew section, 10).

 $^{^{23}\,}$ אעני יכֿרג אעני ... אבא יקרא שוא ותחתה ללפטה פי אול און אי מזאד אי אעלם אן אילם און איל פטה פי אול און איל פטה (ed. Levy 1936, כו.).

labio-dental (see the description of *vav* §I.1.6. for details). It follows, therefore, that *bet rafe* was a voiced labio-dental.

In a few sporadic cases *bet rafe* is represented by Arabic $f\bar{a}^{\gamma}$ in the Karaite transcriptions, e.g.

```
وايزوف (Genizah MS 12, Khan 1990a, 151 | L [BHS]: إيْمَالَة
Num. 19.6 'and hyssop')
```

The transcription with $f\bar{a}^{\flat}$ reflects the perception that this Arabic sound was close acoustically to the voiced labio-dental [v]. It is common in transcriptions of Hebrew in medieval Muslim sources, e.g.

```
al-Bīrūnī, Chronology of Nations, ed. Sachau 1878, 277 | מַרְבָּה 'desert')
```

لفانه (al-Bīrūnī, *Chronology of Nations*, ed. Sachau 1878, 187–192 | לְבָּנְה 'moon')

(Ibn Khaldūn, Schreiner 1886, 253 | בוֹנְה 'Deborah')

There are a few isolated occurrences of *pe* in place of fricative *bet* in biblical manuscripts from Qumran, which could be taken as evidence that the labio-dental pronunciation existed already in the Second Temple period, e.g.²⁴

בפנות (4Q6 f1a.3 | L [BHS]: בְּבְנִוֹת Gen. 34.1 '[to visit the] daughters [of the land]')

²⁴ Data supplied by Aaron Hornkohl.

עפ $^{\text{W}}$ עפ (4Q78 f10–12.7 | L [BHS]: עָבְשָׁוּ Joel 1.17 '[seeds of grain] have shrivelled')

Similar interchanges of fricative *bet* with *pe* are attested in Jewish Palestinian Aramaic, alongside interchanges with *vav*, e.g. 'the Nabatean', נבטייה 'the Nabatean', ניוותאי 'the Nabateans' (Dalman 1894, 74).

 $Hid\bar{a}yat\ al\ Q\bar{a}ri^{3}$ describes the stop [b] as one of the primary letters ($^{2}u\bar{s}u\bar{b}$) and the [v] as an additional secondary letter (far^{6}).

I.1.3. GIMEL גימָל)

Gimel with dagesh (x): voiced velar stop [g]

Gimel without dagesh ($\bar{\lambda}$): voiced uvular fricative [κ]

A *gimel* without *dagesh* is frequently, but not regularly, marked by the *rafe* sign in the model Standard Tiberian codices.

In *Hidāyat al-Qāri*² the name of this letter is spelt גמאל, which appears to reflect a different pronunciation from that of the normal Hebrew form of the name גִּימֶל, with stress on the final syllable. In the Hebrew *Maḥberet ha-Tījān*, a later recension of *Hidāyat al-Qāri*², the name has the form גמ. 27

 $^{^{\}rm 25}$ Long version, edition in vol. 2 of this book, §II.L.1.2.

²⁶ The spelling גמאל is used by ʾAbū al-Faraj Hārūn also in his grammatical text *al-Kitāb al-Kāfī* (ed. Khan, Gallego and Olszowy-Schlanger 2003, e.g. §I.25.35., §I.25.40., §I.28.2., §I.28.11., §I.28.12.) and by the anonymous Karaite author of the grammatical text *Kitāb al-Uqūd* (ed. Vidro 2013, 27, 317).

²⁷ Ed. Derenbourg (1871, 36).

Gimel with dagesh was a stop, which, according to $Hid\bar{a}yat$ al- $Q\bar{a}ri^{\flat}$, was articulated with the middle of the tongue. The Karaite transcriptions represent it by Arabic $j\bar{i}m$ or, occasionally, by $k\bar{a}f$, 29 e.g.

```
هجاميل (BL Or 2539 MS A, fol. 63r, 3 | L [BHS]: הَذِيرَל Gen. 21.8 'to be weaned')

(BL Or 2554 fol. 11r, 7 | L [BHS]: كبور (Ruth 2.1 'mighty')
```

These Arabic letters were pronounced respectively as a voiced palatal plosive [\mathfrak{f}] and an unvoiced velar plosive [\mathfrak{k}^h]. This is the pronunciation described by the early Arabic grammarians Sībawayhi and al-Khalīl (eighth century C.E.). Ibn Sīna in the eleventh century describes $j\bar{i}m$ as pronounced slightly further forward.³⁰ The Karaite transcriptions usually render gimel with dagesh by Arabic $j\bar{i}m$ due to the latter being a voiced consonantal plosive close to the place of articulation of [\mathfrak{g}]. It was preferred to $k\bar{a}f$, which differed from $j\bar{i}m$ in being not only voiceless but also aspirated. It was a general principle of the transcriptions that voiced sounds were transcribed by one that was voiced but of a slightly different place of articulation rather than by an unvoiced letter of the same place of articulation.

 $^{^{28}}$ וסט אללסאן, Long version, edition in vol. 2 of this book, §II.L.1.3.7.; Eldar (1980, fols. 10a-10b, lines 61-73).

²⁹ Khan (1990, 4, 2013).

³⁰ Roman (1983, 101–6, 218)

Gimel without dagesh, on the other hand, was a fricative articulated further back, on 'the posterior third of the tongue, which is adjacent to the pharynx, opposite the (soft) palate.'31 In the Karaite transcriptions, fricative gimel is transcribed by Arabic ghayn, which was pronounced as a uvular fricative in the Middle Ages according to the descriptions of the Arabic grammarians.³²

Hidāyat al-Qāri' describes the stop [g] as primary ('as̄l) and the fricative [μ] as secondary (far').

I.1.4. DALET דֻלָּת (ד)

Dalet with dagesh (7): voiced post-dental stop [d]

Dalet without dagesh (7): voiced post-dental fricative [ð]

A *dalet* without *dagesh* is frequently, but not regularly, marked by the *rafe* sign in the model Standard Tiberian codices.

According to $Hid\bar{a}yat\ al\ Q\bar{a}ri^3$, the Tiberians called this letter $d\bar{a}l$, which is the name of the corresponding Arabic letter.³⁴

 $^{^{31}}$ תלת אלוסאן, Long version of Hidāyat al-Qāri 3 , edition in vol. 2 of this book, §II.L.1.3.6.; ed. Eldar (1980, fol. 10a, lines 58-59).

³² Roman (1983, 218).

³³ Long version, edition in vol. 2 of this book, §II.L.1.3.6.; Eldar (1980, fols. 8b, 10a, 254, n.58). Watson (2007, 43–44) considers the uvular fricative [ß] in Modern Arabic dialects to be the emphatic counterpart of the dorsal [g], involving a primary dorsal and non-primary 'guttural' feature.

³⁴ Long version, edition in vol. 2 of this book, §II.L.1.1.2.

This term is found also in some versions of *Sefer Yeṣira* (דל),³⁵ and in the later recensions of *Hidāyat al-Qāri*³, e.g. Arabic *Maḥberet ha-Tijān* (אלדאל),³⁶ Hebrew *Maḥberet ha-Tijān* (דֹל).³⁷

Hidāyat al-Qāri' states that the letter was articulated with 'the extremity of the tongue in combination with the flesh of the teeth', i.e. the gums. 38 Likewise, Saadya describes the place of articulation of dalet as being adjacent to the inside of the upper teeth. 39 When the letter had dagesh, the tongue was pressed firmly against the gums. When it was without dagesh, the tongue was pressed lightly against the gums. Both forms of the letter were articulated in the same place. The term 'end of the tongue' could include both the tip and the blade. Most versions of Sefer Yeṣira state that dalet was articulated with 'the beginning of the tongue', 40 but this is equally vague. The Spanish grammarian Ibn Janāḥ (eleventh century) specifies that it was articulated with the

³⁸ טרף אללסאן מע לחם אלאסנאן, Long version, edition in vol. 2 of this book, §II.L.1.3.7.; ed. Eldar (1980, fol. 10b, ed. Eldar, 1980-81, lines 67-69).

 $^{^{39}}$ ופי דטלנת: Saadya, Commentary; ופי דטלנת: Saadya, Commentary; ופי דטלנת: אנהא הא הא ישנא ופי האלאהא; Saadya, Commentary on Sefer Yeşira (ed. Lambert 1891, 75).

⁴⁰ בראש הלשון (ed. Gruenwald 1971, 147; ed. Hayman 2004, 92–98). According to Morag (1960), however, the phonetic descriptions in *Sefer Yeṣira* reflect the pronunciation of Hebrew in Babylonia, so it must be used with caution when reconstructing the Tiberian pronunciation tradition.

blade of the tongue and not the tip.⁴¹ This corresponds to the description in one version of *Sefer Yeṣira*, where it is stated that the letters דטלנת were articulated with the 'middle' of the tongue.⁴² It is easier, however, to interpret *Hidāyat al-Qāri*' as referring to the contact between the tongue tip and the gums. An articulation with the blade of the tongue with the gums would have involved contact with the teeth.

 $Hid\bar{a}yat\ al\ Q\bar{a}ri\ describes$ the stop [d] as primary ('aṣl) and the fricative [ð] as secondary ($far\$). 43

The medieval scholar Isaac Israeli (ninth–tenth centuries C.E.), who had an expert knowledge of the Tiberian reading tradition, is said to have pronounced fricative dalet with a secondary 'emphatic' articulation (i.e. pharyngealized with retraction of the tongue root and increased muscular pressure) in two words, viz. אַפּדְלֵּי 'his palace' (Dan. 11.45) and יְרַיְדְרְכָּוֹ 'and they have bent' (Jer. 9.2). This was apparently due to the fact that the pe and the resh in these words were pronounced emphatic (see §I.I.1.17., §I.1.20.) and the emphasis spread to the dalet. The evidence for this is found in a commentary to Sefer Yeṣira by Dunash ibn Tamim, who was a physician in court of the Fāṭimids in Kairouan, North Africa, in the tenth century C.E. He was the pupil of Isaac Israeli, who also worked as a physician in Kairouan:

 $^{^{41}}$ פאן דלך אלטרף ליס הו אסלת אללסאן בל מא הו ארפע מן "This end (of the tongue) is not the tip of the tongue but what is slightly posterior to the tip'; $Kit\bar{a}b$ al-Luma' (ed. Derenbourg 1886, 28).

⁴² דטלנת על חצי הלשון משתמשות, *Sefer Yesira* (ed. Hayman 2004, 93).

⁴³ Long version, edition in vol. 2 of this book, §II.L.1.2., Eldar (1980, fol. 8b, 254, n.58).

The Arabs have sounds that the Hebrews do not have, namely the $d\bar{a}d$ of עטים ($qad\bar{b}$) and the $d\bar{a}$ of עטים ($qad\bar{b}$). The meaning of *qadīb* is 'rod' or 'sceptre'. It is written with sade with a dot above it. It is a distinct sound, which resembles dalet rafe. The meaning of 'adim is 'huge'. It is written with tet with a dot above it. It is a distinct sound, which resembles dalet rafe. ... Our master Yishaq, the son of our master Shlomo, of blessed memory, (i.e. Isaac Israeli) used to say that in the language of the Hebrews among the Tiberians there were (the sounds of) $d\bar{a}$ and $d\bar{a}d$ and he used to read ויטע אהלי (Dan. 11.45, L: ויטע אהלי (Dan. 11.45, L: ויָטֵע אהלי אפּדנוֹ 'He will pitch the tents of his palace'44), in which he used to pronounce $d\bar{a}$ although dalet was written. He used to read ויצרכו את (Jer. 9.2, L [BHS]: וידרכו את 'they bent their tongue'), in which he pronounced dad, although dalet was written. The reason for all this was that he was an expert in the reading of the Tiberians. 45

Early in the history of Arabic, the distinction between the pronunciation of $d\bar{a}d$ ($\dot{\omega}$) and $d\bar{a}^{\bar{a}}$ (\dot{b}) broke down. In modern

⁴⁴ BHS erroneously reads L as אָהֵלֵי.

⁴⁵ ויש אצל הערביים הברות שאינם נמצאות אצל העבריים, והם הצדי מן קציב והטא מן ויש אצל הערביים הברות שאינם ונכתב בצדי ונקודה מלמעלה והיא הברה בפני עצמה וגם היא דומה להברת דלת ברפי. ופי' עטים עצום ונכתב בטית ונקודה מלמעלה והיא הברה בפני עצמה וגם היא דומה להברת דלת ברפי ... והיה רבנא יצחק בן רבנא שלמה ז"ל אומר כי יש בלשון העבריים אצל הטבריים הטא והצדי והיה קורא ויטע אהלי אפטנו והיה מיסד הצאד מיסד הטא בלשונו והיא בכתב דלת. והיה קורא ויצרכו את לשונם והיה מייסד הצאד מיסד הטא בלשונו והיא בכתב דלת. וכל זה למה מפני שהיה בקי בקריאת בני טבריה (cited by Mann (1931, 670, n.106). Cf. Schreiner (1886, 221), Dukes (1845, 9, 93), Grossberg (1902, 24).

vernacular dialects, the two have merged either to an emphatic stop d (mainly in urban dialects) or to an emphatic interdental d(mainly in Bedouin dialects) (Versteegh 2011). In medieval Judaeo-Arabic, a sade with an upper dot (2) was used to represented Classical Arabic $d\bar{a}d$ ($\dot{\omega}$) and a tet was used to represent Classical Arabic $d\bar{a}^{\circ}$ ($\stackrel{\bot}{=}$). As a result of their merger in the spoken language already in the Middle Ages, however, there was frequent confusion in the orthography of Judaeo-Arabic texts, in which a historical $d\bar{a}d$ and a historical $d\bar{a}$ were both represented by either \dot{z} or \dot{v} interchangeably. 46 The representation of a Hebrew dalet in the passage by both \dot{v} and \dot{v} and the statement attributed to Isaac Israeli that 'in the language of the Hebrews among the Tiberians there were (the sounds of) $d\bar{a}$ and $d\bar{a}d$ should be interpreted in this light. A single emphatic sound was no doubt intended, presumably the emphatic interdental d [δ^{c}], given the fact that the author in the passage states that these two emphatic Arabic letters resemble dalet rafe.

َ Abū al-Faraj Hārūn in his *al-Kitāb al-Kāfī* refers to the pharyngealization of *dalet* in the words אַפַּדְלֵּוֹ (Dan. 11.45) and לפָטְדָּל 'topaz' (Exod. 28.17):

'Indeed, in Arabic there are letters that are pronounced with sounds that are not found in Hebrew, such as jīm, ḍād and others. Some teachers, however, when reading אָּבֶּדְנֹי 'the tents of his palace' (Dan. 11.45) and אָבֶּדְנֹי 'sardius, topaz' (Exod. 28.17) pronounce the dalet in them like Arabic ḍād or ṣā' and these words sound like אַפַּנְינוּ

⁴⁶ See the discussion by Wagner (2010, 28–32).

פִּטְצָּׂה. This, however, does not increase the number of letters, since the *dalet* has the same form, although the reading of it differs. 47

In some modern reading traditions, *dalet* is pharyngealized when in contact with an emphatic consonant. In the Moroccan reading tradition, for example, this is documented by Akun (2010) as occurring after emphatic $[r^s]$, e.g.

jar⁽¹⁾d⁽¹⁾u (Akun 2010, 72 | L [BHS]: יְרָדָּוּ Exod. 15.5 'they went down')

I.1.5. HE ה) (ה)

Glottal fricative [h]

The name of the letter is normally spelt הֵי or הֵי, vocalized with sere, in the Masoretic treatises.

A dot in a final *he* indicates that the letter was to be pronounced as a consonant and was not merely a vowel letter (*mater lectionis*) for a final vowel, e.g. מְלָּכָּה [lɔ:ɔh] 'to her', but מְלָּכָּה [malkʰɔː] 'queen'. This dot is known as *mappiq* (מְפִּיק), meaning literally 'bringing out, pronouncing'. In medieval sources, such as the Masoretic treatises, the term sometimes is vocalized as *mappeq* (מְפֵּלֵיק, מְפֵּלֶח), ⁴⁸ which is an Aramaic *haf'el* participle from

⁴⁷ Ed. Khan, Gallego and Olszowy-Schlanger (2003, §I.24.2): בל פי אלערבי מן אלאחרף אלמנטוק בהא פי כלאמהם מא ליס לאלעבראני נחו אלגים ואלצאד וגירהםא ואן כאן בעל אלמעלמין אדא קרא אהלי אפדנו ואדם פטדה אכרג אלדאל פיהמא ככרוג אלצאד או אלטא פי אלערבי פיסמע מנה כמסמוע אפצנו פטצה פליס דלך בזאיד פי עדד אלארף אד אלדאל צורתהא ואחדה ואן אכתלפת אלקראה.

⁴⁸ E.g. CUL T-S D1.2.

the root n-p-q 'to come out'. This is the earlier form of the term, mappiq being a later Hebraization. Some manuscripts of Masoretic treatises vocalize the term mappaq (מַפַּק). In $Hid\bar{a}yat$ al- $Q\bar{a}ri$ ' the consonantal pronunciation of he was referred to as 'appearance' ($duh\bar{u}r$). $duh\bar{u}r$ 0.

The *mappig* is in principle marked in consonantal *he* only at the end of a word since in vocalized texts it is only in this context that there would be ambiguity of reading, e.g. לְּדָה [jalˈdɔːɔh] 'her child' as opposed to ילדה [jal'dɔ:] 'girl'. At the beginning or in the middle of a word, a consonantal pronunciation in the onset of a syllable is indicated by a vowel sign on the letter or a following vowel letter, e.g. הַאוֹר 'the light' (Gen. 1.3), יָהַלֶּדְ 'it will go' (Psa. 85.14), הוֹלִידִו 'his giving birth to' (Gen. 5.4) or by a shewa sign in a syllable coda, e.g. פַדהאל [pʰaðahˈʔeːel] 'Pedahel' (Num. 34.28). A word-medial he that does not have a vocalization sign or is not followed by a vowel letter must be read as a vowel letter, e.g. פדהצור [pʰaðɔːˈsˤuːurˤ] 'Pedahzur' (Num. 1.10; despite the normal English spelling of the latter, the he is not pronounced according to the Tiberian reading tradition).⁵¹ In some manuscripts, however, consonantal he is marked with mappig within a word. This is found in particular in words of unusual form in which consonantal he is pointed with shewa, e.g. L and S בהשמה [bɔh[amˈmɔː] 'when it lies desolate' (Lev. 26.43), S בּהַשמה

-

 $^{^{49}}$ E.g. MS S27, fols. 1r-1v, *Hidāyat al-Qāri* $^{\circ}$, short version, edition in vol. 2 of this book, §II.S.2.0.

⁵⁰ Long version, edition in vol. 2 of this book, §II.L.1.3.4.; Eldar (1980, fol. 9b, line 31).

⁵¹ Ofer (2013).

[phaðah'?e:el] 'Pedahel' (Num. 34.28).⁵² In such contexts, the consonantal *he* was evidently felt to be at particular risk of being read incorrectly.

In the manuscript A the dot of the *mappiq* in word-final *he* is often placed low in the letter, as in Prov. 5.19 shown below, and is occasionally written under the letter:⁵³

BHS: בְּאֲהֲבְתָּה 'with her love'

Mappiq is frequently written under final consonantal *he* in manuscripts with Non-Standard Tiberian (Non-Standard Tiberian) vocalization, e.g.

Genizah manuscripts

יגְיִעָה (T-S A11.1, Blapp 2017, 51 | L [BHS]: יְגִיעֲה Job 39.16 'her labour')

לָהִ (T-S A11.1, Blapp 2017, 51 | L [BHS]: לָה Job 39.17 'to her')

אָלוְהַ (T-S A11.1, Blapp 2017, 51 | L [BHS]: אֱלוָהַ Job 40.2 'god')

In Non-Standard Tiberian manuscripts from the Genizah, the *mappiq* is occasionally written in the lower half of the letter (Blapp 2017, 112, 128).

⁵² Yeivin (1980, 285).

⁵³ Yeivin (1968, 49–50).

European manuscripts

בְּקְרֶבֶּה (Codex Reuchlinianus | L [BHS]: בְּקְרֶבֶּה Isa. 19.14 'within her')

אֹתֶהּ (Codex Reuchlinianus | L [BHS]: אֹתֶהּ Isa. 19.17 'her [obj.]')

גְבֿוּלֶּה (Codex Reuchlinianus | L [BHS]: גְבֿוּלֶה Isa. 19.19 'its boundary')

קּגְּבַה (BL Add 21161 | L [BHS]: בְּגְבַה Amos 2.9 'like the height')

Mappiq in the form of a dot under a final consonantal *he* is also found in some manuscripts with Palestinian vocalization, e.g.

בֹּהְ וֹטוֹבֹהְ (T-S 12.197, Kahle 1927, II, 80; Revell 1970a, 95 | L [BHS]: פַּרֵיָה וָטוּבַּה Jer. 2.7 'its fruits and its good things')

In Non-Standard Tiberian manuscripts, a *mappiq* is occasionally written on a word-internal or even a word-initial consonantal *he* with a vocalization sign. In such cases, it is written within the letter, e.g.

Genizah manuscripts

נְהְּרְוֹת (T-S A13.35, Blapp 2017, 191 | L [BHS]: נַהְרְוֹת Psa. 74.15 'streams')

הָהְעַלַּמְהָ (T-S A5.12, Arrant 2020 | L [BHS]: וְהִּתְעַלַמְהָ Deut. 22.4 'and you ignore')

יָהְיָני (CUL Or 1080.A4.18, Arrant 2020 | L [BHS]: יָהְיָני Num. 28.19 'they shall be')

קּהֵה (T-S NS 284.85, Arrant 2020 | L [BHS]: הַּהָה Exod. 3.21 'this')

European manuscripts

וְהְּיֵּיהָ (Codex Reuchlinianus, Morag 1959, 219 | L [BHS]: וְהְיִיתְ 1 Kings 2.2 'and you will be')

Mappiq in Non-Standard Tiberian manuscripts is sporadically marked even where the *he* has the function of a *mater lectionis*.

קּעֲשֵׂה (T-S NS 68.22, Arrant 2020 | L [BHS]: מַעֲשֵׂה Deut. 28.12 'work of')

ְּוְמַבְּהִ (T-S AS 8.123, Arrant 2020 | L [BHS]: וּמַבָּה Lev. 24.21 'and he who strikes')

It is significant that in A and in Non-Standard Tiberian manuscripts that mark *mappiq* under the *he*, when a dot is marked within consonantal 'alef, it is, by contrast, always written within the letter. Moreover, whereas the Masora refers to the dot in 'alef in the four canonical places (§I.I.1.1.) as *dagesh*, the term *dagesh* is never used to refer to the *mappiq*. The Masoretic notes and treatises generally refer to cases of *mappiq* in statements containing the participle *mappeq* 'to pronounce' such as

מלין מן חד וחד מפקין ה׳

'Unique words in which one pronounces he' (Ginsburg 1880, §36)

This demonstrates that the *mappiq* does not represent gemination. Moreover, *he* is not geminated in any other context.

On some occasions in Non-Standard Tiberian manuscripts, a final consonantal *he* is marked with a *shewa* sign, e.g.

Genizah manuscripts

```
אַלְוּהַ (T-S A11.1, Blapp 2017, 47 | L [BHS]: אַלְוּהַ Job 39.17 'God')
```

יְגְבֵּיהְ (T-S A11.1, Blapp 2017, 48 | L [BHS]: יְגְבֵּיהַ Job 39.27 'it mounts')

European manuscripts

זְּגִּיהְ (Codex Reuchlinianus | L [BHS]: אֵיָה Isa. 13.10 '[does not] give light')

When word-final *he* acts as a vowel letter, it is sometimes, though not regularly, marked with *rafe* in the model Tiberian manuscripts, e.g.

- L: וְלֹא יַכְּלְהַ 'she was not able' (Exod. 2.3)
- L: תְּלְּה 'he saw' (Isa. 1.1)
- L: סְּרֵהֹ 'apostasy' (Isa. 1.5)

Rafe is written more regularly in some Non-Standard Tiberian manuscripts, e.g.

Genizah manuscripts:

```
אַשְּׁבֵּה (T-S A11.1, Blapp 2017, 56 | L [BHS]: אַשְּבָּה Job 39.23 'quiver')
```

הַּלְחָמֵּה (T-S A11.1, Blapp 2017, 59 | L [BHS]: מְלְחָמֵה Job 39.25 'battle')

הַשְּׂבֶּה (T-S A11.1, Blapp 2017, 59 | L [BHS]: הַשְּׂבֶּה Job 40.20 'the field')

European manuscripts

הַּמְּלְחָמֶה (Codex Reuchlinianus | L [BHS]: לַמְּלְחָמֶה 1 Sam. 23.8 'to war')

קְּעִילֶה (Codex Reuchlinianus | L [BHS]: קְעִילָּה 1 Sam. 23.8 'Keilah')

שַׁלֵּה (BL Add 21161 | L [BHS]: שַׁלָּה Amos 2.10 'year')

Some Non-Standard Tiberian manuscripts mark a *rafe* sign on *he* in contexts where it is consonantal in the Standard Tiberian tradition, e.g.

ָּהְוֹאָ (T-S A13.20, Blapp 2017, 174 | L [BHS]: הָוֹא Psa. 68.36 (he')

הְּוֹשִּׁיעֵנִי (T-S A13.20, Blapp 2017, 174 | L [BHS]: הּוֹשִּׁיעֵנִי Psa. 69.2 'save me!')

יְהֹּוּדְהֹ (T-S A13.20, Blapp 2017, 175 | L [BHS]: יְהוּדְּהֹ ה. (Psa. 68.28 'Judah')

Here the *rafe* should, it seems, be interpreted as signalling that the letter is consonantal but not geminated.

The Masora identifies a number of cases where a word-final *he* that would be expected to be consonantal is not pronounced:

חד מן י״ח לא מפק׳ ה׳ בסוף תיבותה

'One of eighteen cases in which *he* is not pronounced at the end of the word' (Ginsburg 1880, §37)

This list includes cases where the *he* has the meaning of a 3fs suffix. In some cases, a *rafe* is marked over the *he* in L, e.g.

- L: ותחמרה 'and she daubed it (fs)' (Exod. 2.3)
- L: הַּנְּסְהֵה 'its being founded' (Exod. 9.18)
- L: עונה 'its (fs) iniquity' (Num. 15.31)
- L: עַּדֵה 'its (fs) side' (1 Sam. 20.20)

Another Masoretic note lists pairs of words ending in *he*, in one member of which it is pronounced consonantal and in the other it is not:

```
חד מן י"א זוגין חד מפק' ה' וחד לא מפק' ה' בסוף תיבותה
```

'One of eleven pairs, in one of which *he* is pronounced and the other *he* is not pronounced at the end of the word' (Ginsburg 1880, §38)

Some words in this list exhibit what are clearly variant realizations of the 3fs suffix. In some cases where the *he* is a vowel letter a *rafe* is marked over the *he* in L, e.g.

- L: וֹשְּׁעֶרֶה 'and its (fs) hair' (Lev. 13.20)
- L: וּשְׂעָרֶה 'and its (fs) hair' (Lev. 13.4)
- L: יְאֶתְנַנְּה 'and her hire' (Isa. 23.18)
- L: לְאֶתְנַנְּהַ 'to her hire' (Isa. 23.17)

Examples of such 3fs suffixes without consonantal realization could be interpreted as the phonetic weakening of a final consonantal *he* that has become fixed in the reading tradition.

Alternatively, it may be morphological variation, reflecting different dialectal forms at an earlier period, which has become fixed.

There is ample evidence from the Dead Sea scrolls of the vulnerability of consonantal *he* to weakening in the Second Temple period. The cases of weakening that are discernible in the orthography are between vowels, e.g.⁵⁴

```
אַה'רִים (4Q6 f1.10 | L [BHS]: אַהְרֵיהֶם Gen 48.6 'after them') אלוים (8Q4 f1.35 | L [BHS]: אֱלֹהִים Deut. 11.16 'gods') אלוים (4Q51 9e–i.9 | L [BHS]: לְהַעֲלָוֹת 1 Sam 10.8 'to offer [sacrifices]') ומטו (1QIsa² 10.11 | L [BHS]: וּמְשֵׁהוֹ Isa. 10.24 'his staff') משתריים (1QIsa² 22.26 | L [BHS]: מַהְשְׁהְרֵעֵ Isa. 28.20 '[is too short] to stretch out') מַהְלְּוֹת (1QIsa² 24.18 | L [BHS]: מְהַלְּוֹת (1QIsa² 47.26 | L [BHS]: לְּהַשְׁמִיעַ Isa. 58.4 'to make heard') בתומות (1QIsa² 51.9 | L [BHS]: בַּהְּהַמְוֹת (1QIsa² 51.9 | L [BHS]: בתומות (1QIsa² 51.9
```

Weakening of consonantal *he* occurs also in modern reading traditions. This includes the weakening of final *he* written with *mappiq* in the vocalized text, e.g.

⁵⁴ Data supplied by Aaron Hornkohl.

Kerala

haʃaˈba: (Forsström 2013, 461 | L [BHS]: הְשָׁבֶּה Gen. 50.20 'he meant it [fs.])

In the Babylonian reading tradition, a *mappiq* occurs in a 3fs verbal object suffix attached to a 3fs suffix conjugation form and after an energic *nun* (Yeivin 1985, 336). In both these contexts the suffix is regularly non-consonantal in the Tiberian tradition. The Babylonian *mappiq* is a small superscribed *he*:⁵⁵

ישׁבְלֹתְהׁ [wʃikkʰalˈla:ttʰɔːh] וְשִׁבְּלֶתְה Ezek. 14.15 'and you will make it (f) childless')

ובּעְסַתְּהׁ [wxe:ʕasˈsa:ttʰɔːh] וְבְעֲסַתָּה 1 Sam 1.6 'and she provoked her')

 $^{^{\}rm 55}$ Data supplied by Shai Heijmans.

יבלענה [jivlɔːˈʕaːnnɔːh] יבלענה Isa. 28.4 'he will swallow it (f)')

This is most easily interpreted as reflecting the fact that the Babylonian and Tiberian traditions here have different morphological forms of the 3fs suffix. The occasional occurrence of a non-consonantal variant of the 3fs suffix in the Tiberian tradition in other contexts, therefore, could also be the result of morphological variation.

I.1.6. VAV 11 (1)

Labio-dental [v] and labio-velar semi-vowel [w]

In *Hidāyat al-Qāri*³ the name of this letter is spelt אוא, which represents, it seems, the corresponding Arabic name ($w\bar{a}w$). ⁵⁶

According to *Hidāyat al-Qāri*', the place of articulation was the lips.⁵⁷ This could be referring to a bilabial [w] or labio-dental [v] pronunciation. It is, however, explicitly stated by David ben Abraham al-Fāsī (tenth century C.E.), the Palestinian Karaite lexicographer, that in Palestine consonantal *vav* both with and without *dagesh* was pronounced as a labio-dental. He makes this observation in the entry in his dictionary, *Kitāb Jāmi*' *al-'Alfāẓ* ('The book of the collection of words') on the name ¬iョ:

תּוֹלֵע וּפְּוֵה (Gen. 46.13): name of a man. The accent is on the vav and it is read rafe. The pronunciation of the vav in it is like the way the Palestinians (pronounce the letter in words) such as הַוֹּה 'be!' (Gen. 27.29), הַּוֹה 'ill' [fs.] (Lev.

⁵⁶ E.g. short version, edition in vol. 2 of this book, §II.S.2.2.

⁵⁷ Long version, edition in vol. 2 of this book, §II.L.1.3.9.

20.18, etc.), הָרֵוֶה 'it watered' (Isa. 55.10). Some of the teachers have made a mistake by reading it (like the vav in) רוּח 'spirit' and ניחוֹח 'soothing'. This is because whenever the accent is on the letter before a vay, its pronunciation is light, between the lips, as in רוח 'spirit' and ניחוח 'Soothing', יהושט 'Joshua', לנוע 'to sway' (Jud. 9.9, etc.), שמוע 'to hear', ידע 'to know', נח 'Noah', מח 'brain'. Its pronunciation (i.e. the vav of פוה), like every (consonantal) vav in our (reading tradition), both light (i.e with rafe) and with dagesh, is between the upper teeth and the lower lip. Examples with dagesh are: יֵצֵא קוֹם 'their speech went out' (Psa. 19.5), צוּם 'he commanded them' (Gen. 50.12, etc.), יבאשר צוה 'as he commanded' (Gen. 7.9, etc.), אַשֶּׁר יצוּה 'that he commands' (Gen. 18.19, etc.). Examples with light (*vav*) are: הוָה על-הוָה 'disaster upon disaster' (Ezek. 7.26), הוָה ילָהֶם לְמֶלֶךְ (you) be for them a king' (Neh. 6.6), לָהֶם לְמֶלֶךְ 'and Saul was refreshed' (1 Sam. 16.23), לא־יַבשׁוּ קוַי 'those who wait for me will not be put to shame' (Isa. 49.23). Now, חולע ופוה (Gen. 46.13) is like this.⁵⁸

Al-Fāsī makes the point here that consonantal *vav* in all contexts is pronounced as a labio-dental [v]. The only exception is constituted by words that contain a *vav* followed by a guttural

_

⁵⁸ Kitāb Jāmi' al-'Alfāṣ, ed. Skoss (1936, vol. 2, 451-452): רגֹל ולחנה פי אלויו וקראתה רפי ולרוג פיה אלויו כראי אלשאמיין מתֹל הֱוָה דְּוָה הרְוָה וקד גלט בעל אלמעלמין אלדי יקרוה מתֹל רוּח ניחוֹח ודֹלך אן כל ויו יכון אלחון פי אלחרף אלדי קבלה יכון לרוגה מלפף בין אלשפתין מתֹל רְוּח ניחוֹח יהוֹשֻע לנוּע שׁמוֹע ידע נֹח מֹח. פֹלרוגה כלרוג כל ויו לנא אלמכפף ואלמדגוש בין אלאסנאן אלפוקאניה ואלשפה אלספלאני אעני באלמדגוש מתֹל יצא קַוְּם צוְּם כאשר צוָּה אשר יצוָּה ואעני באלמרפף. מתֹל הוָה להם למלך ורְוַח לשאול לא יבשׁו קוֹי. ומתלה אלאן תולע ופּוָה.

with a furtive *pataḥ* such as נִיחוֹחָ and נִיחוֹחָ, where it is pronounced 'light, between the lips'. This must be referring to a bilabial glide between the vowel and the following *pataḥ* [ˈĸ̞uːwaħ], [niːˈħoːwaħ].

It is stated in the Masoretic treatises that consonantal *vav* had the same pronunciation as *bet rafe*, e.g.

Every *vav* at the end of a word is pronounced according to the Palestinians as a *bet rafe*. (*Hidāyat al-Qāri*²)⁵⁹

Know that every *vav* that is prefixed to the beginning of a word and has *shewa* is read with (the pronunciation of) *bet*.

... I mean it is pronounced as if it were the letter *bet*, as in ... יאמר 'and he shall say.' (*Treatise on the Shewa*)

Al-Fāsī indicates that the *vav* in the name and (Gen. 46.13) was pronounced like other cases of consonantal *vav*, i.e. as labiodental [v]. He says, however, that some teachers mistakenly read it as a bilabial [w]. This implies that there were different traditions of pronouncing the *vav* in this context. Misha'el ben 'Uzzi'el

(tenth-eleventh century) makes the following observation about

it has a vav that (is pronounced) in the way it is read in

the pronunciation of *vav* in this word in his *Kitāb al-Khilaf*:

As for the word וּפֵוָה (Gen. 46.13), there is a consensus that

⁵⁹ Long version, edition in vol. 2 of this book, §II.L.1.7.7.

ה אעני יביג אעני יביג ... אעלם אן ללפטה ותחתה שוא יקרא פי אול מזאד פי אול ללפטה (ed. Levy 1936, כו.).

Iraq, not like *bet rafe*, as in words such as עָנְיִים 'poor' and so forth (in the pronunciation) of the Palestinians. 61

The consensus referred to here is between the foremost Tiberian Masoretic authorities Ben Asher and Ben Naftali. They pronounced the *vav* in this word in the Babylonian fashion, i.e. as a bilabial [w], not like the labio-dental pronunciation of a *bet rafe*. This was presumably conditioned by the preceding [u:] vowel: [fu:wo:].

In Non-Standard Tiberian manuscripts, there are sporadic cases of fricative *bet* being written where Standard Tiberian orthography has a consonantal *vav*, which reflects their identical phonetic realization, e.g.

 $$\rm i = 1.5 \ A5.7, \ Arrant \ 2020 \ | \ L \ [BHS]: יבְגַאֲבָחָ Deut. 33.26 'and in his majesty')$

קְּחַבְּיִלְּה (T-S A21.125, Arrant 2020 | L [BHS]: הְחַבִּילָה Gen. 2.11 'Havilah')

שֶׁב (T-S AS 44.35, Outhwaite 2020 | L [BHS]: שֶׁב Lam. 2.15 'emptiness')

In Karaite transcriptions into Arabic script, a *vav* is generally transcribed by Arabic $w\bar{a}w$. It is sometimes, however, transcribed by the Arabic letter $b\bar{a}^{\flat}$. Arabic $b\bar{a}^{\flat}$ is used elsewhere to transcribe both plosive *bet* [b] and fricative *bet* [v]. The occa-

-

 $^{^{61}}$ ואמא לפטה ופָּוה מא פיהא כֿלף בוָו עלי מא יקרא אלעראק אלבי אלרפי אלרפי אלרפי אלפטה וואָרה מא לפטה ואמא לפטה אלרשאמיין, *Kitāb al-Khilaf* (ed. Lipschütz, 1965, p.ב).

sional use of $b\bar{a}^{\flat}$ to transcribe vav indicates that scribes were confusing the labio-dental realization [v] of vav with that of bet rafe. It is attested as a transcription of medial and final vav, e.g.

אַ (Genizah MS 1, Khan 1990a, 45 | L [BHS]: הַמְּצְוֹּת Num. 15.22 'the commandments')

وقوبي (BL Or 2548 fol. 42r, 3 | L [BHS]: إج الله Isa. 40.31 'those who are hoping for')

יָאוֹבּוֹף (Genizah MS 1, Khan 1990a, 45 | L [BHS]: בְּגָדֵיי Num. 19.19 'his clothes')

Examples are attested in manuscripts of the transcription of consonantal vav with $b\bar{a}^{\flat}$ when preceded by long [u:], e.g.

This corresponds to al-Fāsī's description of the *vav* in this context in the word פַּוָה as a labio-dental [fuːˈvɔː], but not the bilabial pronunciation [fuːˈwɔː] that is ascribed by Misha'el ben 'Uzzi'el to Ben Asher and Ben Naftali.

There is even one documented case of $b\bar{a}^{2}$ transcribing a glide before a furtive *patah*:

نوبع [ˈnoːvaʕ] (Genizah MS 13, Khan 1990a, 155 | L [BHS]: بزير Psa. 109.10 'and wander')

This does not correspond to al-Fāsī's description of a bilabial [w] in this context.

The medieval sources, therefore, reflect a variety of different distributions of the labio-dental [v] pronunciation of consonant *vav*. These are summarized below:

	Default	After pretonic [u:]	Glide after [uː]/[oː]
Misha ³ el	[v]	[w]	?
al-Fāsī	[v]	[v]	[w]
Transcriptions	[v]	[v]	[v]

It should be pointed out that the transcription in which the form نوبع [ˈnoːvaʕ] is attested is a liturgical florilegium of biblical verses and exhibits several other deviations from Standard Tiberian reading.

We learn from the passage in the *Treatise on the Shewa* cited above that an initial conjunctive *vav* with a *shewa* was pronounced as a labio-dental like *bet rafe*, e.g. וְּאָמֵר [vɔʔɔːˈmaːaʀ̩] 'and he will say'. How was conjunctive *vav* pronounced when it has the form i, i.e. before the labial consonants and or before a silent *shewa*? This is described in a further passage from the *Treatise on the Shewa*:

When the vav is next to these three letters, namely \dot{c} , it should not be pronounced in this way (i.e. like bet) and it is not pointed with shewa, but rather with one point in the

body of the vay, as in בנה 'and he will build' (Josh. 6.26, etc.), ובראתו 'and you will clear it' (Josh. 17.18), ובראתו 'and he will create' (Isa. 4.5), ובינת 'and the discernment of' (Isa. 29.14), וֹבֶר 'and clean' (Job 11.4), יבֶּר 'and lest' (Deut. 4.9, etc.), ופנה 'and he will turn' (Deut. 31.20, etc.), ופנה 'and Put' (Gen. 10.6), יפֵי 'and the mouth of' (Exod. 39.23, etc.), 'and beans' (2 Sam. 17.28), יפחי 'and breathe' (Ezek. מלד, (cf. ומלד, 'and king' (Gen. 14.2, etc.), ומלכותה (cf. ומלד, ומלכותה 'her royal office' Esther 1.19), ימשל 'and the ruler' (Gen. 45.8, etc.), ומַקלו 'and his staff' (Hos. 4.12), ימַקלו 'and from upon' (1 Sam. 6.5, etc.), ימעל 'and he acted treacherously' (cf. מעל Josh. 22.20). Nothing of this category is found that is pointed or read ופיט, or ופיט, because these three letters are different from the other letters in this respect. When they read them (i.e. these words), it is not pronounced bet; I mean, the vav in them is not pronounced bet, as the aforementioned cases that have shewa. Rather, you read their vavs as if you are pronouncing is, as if you are saying אבנה, אברא, אפנה אמלך. You should read all of them in this way. You need not read with a pure 'alef, for an 'alef does not appear in them, but I have only compared it (to 'alef) by way of approximation. ... And if the second letter of the words has shewa, then it is always pointed and read with a point in the body of the vav and it is not read as bet, I mean with shewa, rather it is read as a pure vav, as in יללוי 'and regarding Levi' (Deut. 33.8), יללוי 'and hear' (Exod. 23.21, etc.), ודבר 'and the matter of' (Num. 23.3), יּקְרָא 'and call' (Ruth 4.11, etc.), יּרְדֿי 'and have dominion over' (Gen. 1.28, etc.), and other cases. 62

According to this passage, the onset of the syllable represented by conjunction i was not 'alef. It would be inappropriate, therefore, to transcribe it as [?u:]. This, moreover, would be a heavy CVV syllable, with a consonantal onset and long vowel in the rhyme. This would be an unexpected syllabic structure for a particle that has *shewa* in other contexts, when compared to the syllable structure of particles such as in an open syllable, represented by *shewa* (i.e. [ba], [la], see §I.2.5.1.) or a short vowel in a closed syllable when followed by a silent *shewa*, e.g. לְּשֶׁמוֹאֵל [liʃmuːˈʔeːel] 'to Samuel'. It would be more appropriate to interpret the syllable structure of conjunctive vav i as [wu], with a voiced labio-velar approximant [w] as onset. Such a voiced onset would resemble the vowel nucleus [u] in acoustic and articulatory properties, and therefore would be difficult to distinguish from a long [u:].

אלכרוג ולא תנקט בשוא בל בנקטה ואחדה פי גוף אל וָו מתל ובנה ובראתו וברא ובינת ובר ופן ופנה ופוט ופי ופול ופחי ומלך ומלכות ומושל ומקלו ומֵעל ומְעל וליס יוגד פי הדא אלגנס אלבתה שי ינקט ולא יקרא ובָנה ולא ומְשל ולא ופוט לאן הדה אלתלתה אחרף

The Karaite transcriptions, indeed, represent the conjunction with an initial Arabic *wāw* and not an Arabic *alif*. In some transcriptions, word-initial is represented by Arabic *wāw* vocalized with a Hebrew *qibbus*, e.g.

```
ولنجدي (BL Or 2539 MS A, fol. 65r, 3 | L [BHS]: יְלֶנֶכְהֵי
21.23 'to my posterity')
(BL Or 2539 MS B, fol. 124v, 9 | L [BHS]: יְתַבֶּל Num.
17.25 'so that you may make an end')
```

Elsewhere in the manuscripts long [u:] is transcribed with a *shureq* point in $w\bar{a}w$, e.g.

```
احوَتْنُو (BL Or 2539 MS A, fol. 77r, 7 | L [BHS]: احوَتْنُو Gen. 24.60 'our sister')

میحوص (BL Or 2539 MS A, fol. 113v, 5 | L [BHS]: מְּבְּפַׁת Deut. 23.11 'from outside')

Deut. 2539 MS B, fol. 122v, 11 | L [BHS]: تَجِعُو Num. 16.26 'you touch')
```

This applies even to cases where the orthography in the Hebrew *ketiv* is defective and the Tiberian codices have a *qibbus*, e.g.

```
לְנְשְּׁבְּיוֹנ (BL Or 2539 MS A, fol. 63r, 2 | L [BHS]: לְּקְבֵּיוּ: Gen. 21.7 'in his old age')
```

This suggests that the vocalization with *qibbuṣ* reflects a consonantal + short vowel [wu]. In one manuscript an Arabic *damma* vowel is written on the *wāw* rather than a *qibbuṣ*, e.g.

In one manuscript, an initial conjunctive \mathfrak{t} is transcribed by Arabic $w\bar{a}w$ vocalized with a Hebrew *shewa*. This most likely represents a consonantal onset followed by a short vowel, e.g.

In one manuscript an Arabic fatha sign is marked over the $w\bar{a}w$ that transcribes conjunctive 1, e.g.

```
وَمي (BL Or 2552 fol. 99v, 5 | L [BHS]: بَيْن Ecc. 2.19 'and who')
```

This reflects a variant reading tradition in which the conjunctive vav is read [va] even before a labial. This may be what the vocalization with *shewa* in the manuscript BL Or 2539 MS A was intended to represent. In Standard Tiberian pronunciation [wu] reflects the shift of the short vowel to a rounded quality by assimilation to the labial environment. One may compare traditions of reading such as [vami:] (L [BHS]: יבָּיִי) to cases in Origen's Hexapla such as the following, where the Greek transcription has oug or oue where the Standard Tiberian tradition has i:63

```
סטמאסט (Ambrosiana Palimpsest | L [BHS]: יְדְעוּ Psa. 46.11 'and know! (mp)')
```

סטמאסωνι (Ambrosiana Palimpsest | L [BHS]: וְלְשׁוֹנִי Psa. 35.28 'and my tongue')

ουαρημ (Ambrosiana Palimpsest | L [BHS]: וְרָעֵם Psa. 28.9 'and shepherd (ms) them!')

ουεβροβ (Ambrosiana Palimpsest | L [BHS]: κτίτ Psa. 49.7 'and in the multitude of (cstr.)')

Similar forms are occasionally found in the Babylonian tradition, e.g. 64

וֹבמישׁוֹר (Yeivin 1985, 1152 | L [BHS]: וּבְמִישׁוֹר Mal. 2.6 'and in uprightness')

⁶³ Data supplied by Ben Kantor.

⁶⁴ Data supplied by Shai Heijmans.

The normal vocalization of *vav* in the Babylonian tradition in such contexts, however, is with *ḥireq*, e.g.

וֹמהוֹמֹה (Yevin 1985, 338 | L [BHS]: וּמְהְוּמָה Prov. 15.16 'and trouble')

וֹבפֿשׁעיכם (Yevin 1985, 342 | L [BHS]: וּבְפִּשְׁעֵיכֶם Isa. 50.1 'and for your transgressions')

וֹבכשׁלּוֹן (Yevin 1985, 352 | L [BHS]: וּבְכִשְׁרָזן Ecc. 2.21 'and with skill')

There is an exceptional case of *ḥireq* in L after conjunctive *vav* in this context, where is expected:

L [BHS]: וְשְׁאֵלְךְׁ (Gen. 32.18 'and he will ask you' | S: וּשְׁאֵלְךֹּ

When word-initial conjunctive \mathfrak{t} is followed by a consonant with silent *shewa*, it sometimes takes minor ga'ya in the Tiberian tradition. Minor ga'ya lengthened the duration of a short vowel in a closed syllable slightly (represented in IPA as a half-long vowel, cf. §I.2.8.2.2.). When this is the case, some transcriptions represent the lengthened syllable with two Arabic $w\bar{a}ws$. This must be interpreted as representing a consonantal onset followed by a lengthened vowel [u·] vowel, i.e. [wu·], e.g.

The same transcription is found when a word-initial conjunctive i is lengthened by a phonetic ga^cya (§I.I.2.5.8.4.), which causes a following *shewa* to be read as vocalic, e.g.

In some model Tiberian codices a *vav* before a following [u:] is written with a dot. This could be interpreted as an attempt to represent a labio-velar onset [w] rather than [v], e.g.⁶⁵

L, A: וַיִּשְׁתַחוּוּ (Deut. 29.25 'and they worshipped')

L, B: טְוָּוֹ (Exod. 35.26 'they span')

C: וְגִלְנֵוּ (Jer. 50.5 'let us join')

In some manuscripts, consonantal *vav*, before [u:] and also in other contexts, is marked with a *rafe*, e.g.⁶⁶

C: וְתַשְׁוֹוִ (Isa. 46.5 'and you make equal')

L: זְּיהֵי (Psa. 90.17 'and let it be')

In manuscripts with Non-Standard Tiberian vocalization, these two strategies for marking consonantal *vav* have been extended to other contexts. The placement of a dot in consonantal

⁶⁵ Yeivin (1980, 285–286).

⁶⁶ Yeivin (1980, 286).

vav is found in such manuscripts in word-initial, word-medial and word-final position, e.g.

Genizah manuscripts

```
ָרְאָבֶרְץ (T-S A13.20, Blapp 2017, 162 | L [BHS]: יְאֵרֶץ Psa. 69.35 'and earth')
```

ְּשְׁם (T-S A13.20, Blapp 2017, 162 | L [BHS]: וְעֶם Psa. 69.29 'and with')

ּתְּקְוָתֵּי (T-S A13.20, Blapp 2017, 162 | L [BHS]: תְּקְוָתֵּי Psa. 71.5 'my hope').

 \upsigma^2

European manuscripts

```
יאַלָּיו (ASCNON B.I.1v, Pilocane 2004, 27 | L [BHS]: אֵלֶיו
Num. 27.11 'to him')
```

In such contexts, the *vav* would have been pronounced as a labio-dental according to the Standard Tiberian tradition. Moreover, in some cases, a vowel sign is written under it, which shows it must be consonantal, e.g. יְמֵּבֶרְץ. Comparison with the strategies for marking consonantal *vav* in the Babylonian and Palestinian traditions, however, suggest that the dot in the *vav* should be interpreted as a *shureq* vowel sign. Its purpose in the Non-Standard Tiberian manuscripts was to ensure that the letter was read as a separate segment from the adjacent vowel, although it was only an approximating representation of its pronunciation, i.e. presumably a labio-dental.

In Babylonian vocalization, consonantal vav is sometimes vocalized with a sign that can only be interpreted as a *shureq* vowel, e.g.⁶⁷

אבׁייֹ (OB, Yeivin 1985, 267 | L [BHS]: אָבֶיי Deut. 27.16 'his father')

וּלפּנִיי (LB, Yeivin 1985, 267 | L [BHS]: וּלְפָּנָיי Job 21.33 'and before him')

לגו' (OB, Yeivin 1985, 267 | L [BHS]: לְגֵוּ Prov. 26.3 'for the back')

According to the Misha'el ben 'Uzzi'el in the passage cited above, the Iraqis, i.e. the Jews of Babylonia, pronounced consonantal *vav* as a bilabial, so a *shureq* was more appropriate as a representation of its pronunciation than in the Tiberian tradition. In manuscripts with Palestinian vocalization, the vowel sign of *holem* occasionally represents consonantal *vav*, e.g.

וישתחוֹו (Bod. Heb. d 44, ff. 1-4, Dietrich 1968, 25* | L [BHS]: יַּשְׁתַּחְוּי־לָּוֹ 2 Kings 2.15 'and they bowed before him') מוֹעתי (T-S 20.53, Murtonen 1958, לד, Allony and Díez Macho 1958, 259 | L [BHS]: שִׁיְּעָתָּי Psa. 30.3 'I cried')

The *holem* sign here, as with the Tiberian *shureq*, must be regarded as an approximating representation of the labio-dental pronunciation of Palestinian consonantal *vav*.

In Gen. 46.13 L has a dot in the second vav of הְּמָה. Some early codices do not have the dot, e.g. S: הַּמַה. In B a dot appears

⁶⁷ Data supplied by Shai Heijmans.

to have been written and then erased. The name occurs also in Num. 26.23 where L and other early codices have לְּפֵּלְּה without the dot. It is likely that the dot in the vocalization of L in Gen. 46.13 should be identified as *shureq* to mark the consonantal pronunciation of the letter rather than a *dagesh* and the reading [fuːˈwɔː] was intended, as in other manuscripts. (Yeivin 1985, 764), with a *shureq* over the *vav* and no vocalization on the *pe*. This could be compared to Tiberian vocalizations such as רוֹחַ , which al-Fāsī claims contained a bilabial glide: [หุน:waħ]. Babylonian is likely to have been intended to represent [fuːˈwɔː].

In Non-Standard Tiberian manuscripts, *rafe* is marked on consonantal *vav* in a wider range of contexts than in the Standard Tiberian codices. It is found on *vav* in word-initial and word-medial position, e.g.

```
קָּבֶּם (T-S A12.1, Blapp 2017, 99 | L [BHS]: וְגָם Ruth 1.12 'and also')
```

```
תְּקְוֵה (T-S A12.1, Blapp 2017, 99 | L [BHS]: תִּקְוָה Prov. 29.20 'hope')
```

הַּצְּאֲוֹת (T-S A12.1, Blapp 2017, 99 | L [BHS]: גַּאֲוֹת Prov. 29.23 (pride')

 $^{^{\}rm 68}$ A trace of dot is visible and the parchment has been scraped.

⁶⁹ In later sources the dot in the word is referred to as a *dagesh*. Jedidiah Norzi (seventeenth century) in his work *Minḥat Shai* (Mantua, 1742–44 ad loc. Gen. 46.13) refers to it as *dagesh* and notes that there were differences of opinion about its presence in the name in Gen. 46.13 in the sources available to him.

The function of the *rafe* here is to mark the letter as consonantal but ungeminated.

Occasionally a *rafe* sign is used to mark consonantal ungeminated *vav* in Palestinian vocalization, e.g.

```
ֿעװֶל (T-S 12.195, Kahle 1930, 83 | L [BHS]: שָׁנֶל Psa. 53.2 'iniquity')
```

In Non-Standard Tiberian manuscripts, a consonantal *vav* is indicated by a *shewa* sign, often written within the letter. The *shewa* makes it clear that the letter closes a syllable and so is to be read as a consonant, e.g.

Genizah manuscripts

```
עָלֶּיִן (T-S A13.18, Blapp 2017, 125 | L [BHS]: עָלֶיו
'on him')
```

```
רְבֶּקְי (T-S A13.18, Blapp 2017, 125 | L [BHS]: בְּנָפֵּי Psa. 91.4 'his wings')
```

European manuscripts

```
יְשֹׁוּלֵּיִין (Codex Reuchlinianus, Morag 1959, 219 | L [BHS]: וְשׁוּלֵיִי
 וְשׁוּלֵיִי Isa. 6.1 'and his train')
```

וְהָרִיּוֹהֶּין (BL Add 21161 | L [BHS]: וְהָרִיּוֹהָּין Hos. 14.1 'and his pregnant women')

The distinction in the Middle Ages between the pronunciation of *vav* as a labio-dental in Palestine and its pronunciation as bilabial in Iraq is continued in modern reading traditions. In reading traditions of the Levant, such as Aleppo, consonantal *vav* is pronounced as a labio-dental, e.g.

hajˈjav (Aleppo, Katz 1981,4 | L [BHS]: תַּלָּיִי Gen. 47.28 'his life')

יְעבֶּד' (Aleppo, Katz 1981,9 | L [BHS]: יְגָּדֶל Gen. 48.19 'and he also will be great')

In the Samaritan reading tradition, consonantal *vav* has shifted to [b] (except in the case of conjunctive *vav*), reflecting its merger with fricative *bet* [v] and the consequent shift of fricative *bet* [v] to plosive *bet* [b] (Ben-Ḥayyim 2000, 33–34), e.g.⁷⁰

bä́bīyyima (Samaritan, Ben-Ḥayyim 2000, 33-34 | L [BHS]: נֵיקֶם Exod. 26.32 'their hooks')

īšåb (Samaritan, Ben-Ḥayyim 2000, 33-34 | L [BHS]: עֵשֵׂו Gen. 25.25 'Esau')

The occurrence of pe in place of consonantal vav in a biblical manuscript from Qumran could be taken as evidence that the labio-dental pronunciation already existed in the Second Temple period:⁷¹

צפה אדוני ליעקוב (4Q111 3.8 | L [BHS]: אַהָּ יְהַנֶּה יְהנֶה לְיַעֲקָב Lam. 1.17 'The Lord commanded Jacob')

The pre-Masoretic transcriptions into Greek and Latin, however, reflect a pronunciation of the consonantal vav as a bilabial [w]. In Greek this is represented by ov or v and in Latin by u, e.g.⁷²

 $^{^{70}}$ Here and elsewhere the transcription system of Ben-Ḥayyim is used for the Samaritan tradition.

⁷¹ Data supplied by Aaron Hornkohl.

⁷² Data supplied by Ben Kantor.

Septuagint (third century B.C.E.)

Οὐκάν (Göttingen Septuagint | L [BHS]: וַעֵּקָן Gen. 36.27 'Akan')

Eὕαν (Göttingen Septuagint | L [BHS]: תַּיָּה Gen. 4.1 'Eve') Hexapla of Origen (c. 185–254 C.E.)

ουαδωρ (Ambrosiana Palimpsest | L [BHS]: יְדֶר Psa. 49.12 'and generation')

βγηουαθω (Ambrosiana Palimpsest | L [BHS]: בְּגַאֲוָתוּ Psa. 46.4 'at its swelling')

Jerome (346-420 C.E.)

uaiomer (Jerome, *Epistula* LXXIII.55.18, ed. Hilberg | L [BHS]: יָאמֶר Gen. 4.15 'and he said')

illaue (Jerome, *Hebraicae Quaestiones in Libro Geneseos*, ed. de Lagarde et al., 6.5, 6, 12 | L [BHS]: יֵלֵיָה Gen. 29.34 '[my husband] will join himself [to me]')

In medieval Greek transcriptions, on the other hand, consonantal *vav* is represented by β , which reflects [v], e.g.

Nikolaos of Otranto (1155/60–1235)

βεέθ (Kantor forthcoming | L [BHS]: וְאֵח Gen. 1.1 'and (direct object marker)')

βιγιομερου (Kantor forthcoming | L [BHS]: וַיָּאֹמְרֹי Ex. 32.4 'and they said')

In modern Iraqi reading traditions, such as Baghdad (Morag 1977, 8) and Kurdistan (Sabar 2013), *vav* is pronounced as a bilabial [w]. The same applies to the Yemenite reading tradition,

which was closely related historically with Babylonia in the Middle Ages (Morag 1963; Ya'akov 2015), e.g.

w^ejɪd'gu (Baghdad, Morag 1977,8 | L [BHS]: וְיִדְגָּוּ Gen. 48.16 'and let them increase')

wă \int ofat $^{\varsigma}$ (Yemen, Morag 1963,42 | L [BHS]: יְשֶׁפַּט Isa. 2.4 'and He will judge')

I.1.7. ZAYIN יין (ז)

Voiced alveolar sibilant [z]

According to *Hidāyat al-Qāri*⁷, the Tiberians called this letter zāy (זאי), which is the name of the corresponding Arabic letter. A shortened form of the name, zay, was also used in Jewish Palestinian Aramaic (Sokoloff 1992, 175) and Syriac (Payne Smith 1879, 1116).

Hidāyat al-Qāri⁷ states that the place of the articulation of the letter is the teeth.⁷⁴ This evidently refers to the movement of the teeth accompanying the pronunciation of the sibilants. The author does not mention the action of the tongue, which was the main articulator.⁷⁵ The *Sefer Yeṣira* describes *zayin* as being articulated between the teeth with a 'resting tongue', or a 'flat

⁷³ Long version, edition in vol. 2 of this book, §II.L.1.1.2.

 $^{^{74}}$ Long version, edition in vol. 2 of this book, §II.L.1.3.8. Eldar (1980, fol. 10b, line 77).

⁷⁵ Cf. Eldar (1980, n.70).

tongue' according to some versions.⁷⁶ In both these passages, the intention may have been that the tongue tip was not engaged in the articulation of the letter, i.e. it was articulated with the blade.

Hidāyat al-Qāri' mentions that there is a variant form of zayin which is called $z\bar{a}y$ makrūkh, but the author says he knows nothing about it.

It is said that there are some who attribute a particular feature to *zayin* and call it $z\bar{a}y$ *makrūkh*. I have not, however, been able to identify their purpose in using the term *makrūkh*, so that I could have described it.⁷⁷

It has been stated previously that I do not know anything that I can report about the *zāy makrūkh*. I have only mentioned it so that it be known that letters have different attributes.⁷⁸

The term $makr\bar{u}kh$ was used to refer to an emphatic, i.e. pharyngealized, form of resh (§I.1.20.). It appears, therefore, that

 $^{^{76}}$ בין שינים ובלשון ישן 'between the teeth and with a resting tongue', בלשון ישן 'with a resting and flat tongue' (ed. Gruenwald 1971, 147; ed. Hayman 2004, 92–98).

⁷⁷ Long version, edition in vol. 2 of this book, §II.L.1.2.

⁷⁸ Long version, edition in vol. 2 of this book, §II.L.1.9.8. Cf. also Eldar (1984a, 32). The Yemenite orthoepic treatise known as the Hebrew *Maḥberet ha-Tijān*, which was based on the long version of the *Hidāya*, contains a similar statement: יכן יש להם זי׳ן נקרא מכרוך ואינו ידוע אצלינו 'They (i.e. the Jews of Palestine) have a *zayin* called *makrūkh*, but it is unfamiliar to us (i.e. the Jews of Yemen)' (ed. J. Derenbourg 1871, 81); cf. Morag (1960, 210, n. 45).

the $z\bar{a}y$ makrūkh was an emphatic [z^{ς}], though its distribution is unknown.

An anonymous Masoretic treatise refers to two variant forms of the letter *sade* in the Tiberian Hebrew reading tradition:

There is another letter (with two realizations), which the people of Palestine never utter (in their vernacular speech). This is *şade* and (variant) *şade*. It is, however, familiar to the inhabitants of the lands (of the diaspora) due to their living in close proximity to other peoples and their using other languages and languages of other nations.⁷⁹

It is possible that this is referring to a voiced variant of *ṣade*, i.e. $[z^s]$. Ibn Khaldūn (North Africa, d. 1406), indeed, refers to a voiced allophone of *ṣade* $[z^s]$ in the pronunciation of the name אַמַּצְיָהָנּ, i.e. [ʔamaz^s]p:hu:].⁸⁰

Sībawayhi describes the existence of an emphatic $[z^s]$ sound in Arabic, which arose through partial assimilation of the letter $s\bar{a}d$ to an adjacent voiced consonant. With regard to the pronunciation of the $s\bar{a}d$ in the word masdar 'source' he states:

_

⁷⁹ Ed. Allony (1973, 102, lines 29-32 [Allony's reading has been corrected in places]): חרף אכר לא יקולוה אהל אלשאם בתה והו צדי צדי ואנמא אולפוה סכאן אלבלדאן ללמגאורה ואלמסאכנה בגיר קבאילהם ואלאסתעמאל בגיר אלפוה סכאן אלבלדאן ללמגאורה ואלמסאכנה בגיר קבאילהם ולגה אמם גירהם אלפוה לגה אמם גירהם ולגה אמו לאמור, but this attribution has been disputed by Eldar (1984a, 33, n.54, 1986, 59–61).

⁸⁰ He describes the *ṣade* as *al-ṣād al-mušamma bi-l-zā* $^{\circ}$ 'ṣād flavoured with $z\bar{a}^{\circ}$ '; cf. Schreiner (1886, 254).

They make it (the $s\bar{a}d$) similar to the homorganic letter that is most like $d\bar{a}l$, i.e. $z\bar{a}y$, since it is unaspirated and not emphatic, but they do not change it into pure $z\bar{a}y$, lest the emphatic quality of the letter be removed.⁸¹

An emphatic Arabic $z\bar{a}y$ was recognized as an additional Arabic letter in some medieval works on the correct recitation of the Qur'ān ($tajw\bar{\iota}d$), where a voiced variant of an Arabic $s\bar{a}d$ is intended.⁸² The Tiberian terminology may have been influenced by this tradition in the Arabic $tajw\bar{\iota}d$ literature.

The statement in *Hidāyat al-Qāri*³ concerning the *zāy makrūkh* implies that it is a variant of the written letter *zayin* ('there are some who attribute a particular feature to *zayin*'). The foregoing discussion, however, suggests that the term is referring to the voiced oral reading of the *ṣade*.

I.1.8. HET חית (ח)

Unvoiced pharyngeal fricative [ħ]

This letter is transcribed by Arabic $h\bar{a}^{5}$ (unvoiced pharyngeal fricative) in the Karaite transcriptions, e.g.

⁸¹ فضار عوا به اشبه الحروف بالدال من موضعه وهى الزاى لانها مجهورة غير مطبقة ولم يبدلها all_{all} , all_{all}

⁸² Makkī ibn ʾAbī Ṭālib al-Qaysī (d. 437/1045), for example, refers to ṣād allatī yukāliṭu lafẓuhā lafẓa al-zāy 'A ṣād whose pronunciation is mixed with that of zāy', as in قصد (قصد and الصراط الخراط), al-Ri'āya li-Tajwīd al-Qirā'a wa-Tahqīq Lafz al-Tilāwa (ed. Farhāt 1996, 107).

```
בيط (BL Or 2539 MS A, fol. 100r, 8 | L [BHS]: בيط (BL Or 2539 MS A, fol. 65r, 3 | L [BHS]: كَا جُاسِنَّ Gen. 21.23 'like the kindness')

מאנייב (BL Or 2539 MS A, fol. 67v, 1 | L [BHS]: הַמִּזְבַּׁחַ Gen. 22.9 'the altar')
```

According to *Hidāyat al-Qāri*³, the pharyngeals and the laryngeals had the same place of articulation:

The letters אהחע have a single place of articulation. This is the throat and the root of the tongue. The Tiberians call it the 'root of the tongue' and 'place of swallowing'.⁸³

It is possible that the division of this place of articulation into the 'root of the tongue' and 'place of swallowing' was intended to refer to the production of the pharyngeals and laryngeals respectively. Some medieval grammarians state that *ḥet* and its voiced counterpart 'ayin were articulated less deep in the throat than 'alef and he.⁸⁴

In the Standard Tiberian tradition, *het* does not take *dagesh*. According to *Hidāyat al-Qāri*², the letter *het* could not be made

⁸³ Long version, edition in vol. 2 of this book, §II.L.1.3.2.

⁸⁴ Ibn Janāḥ, *Kitāb al-Luma^c* (ed. Derenbourg 1886, 26–27), Menaḥem ben Saruq, *Maḥberet* (ed. Filipowski 1854, 6).

'heavy' with *dagesh*,⁸⁵ i.e. it could not be pronounced with different degrees of muscular pressure.

In Non-Standard Tiberian vocalization, the distribution of dagesh is different from that of the Standard Tiberian tradition. The distribution of dagesh characteristic of the בגדכפת consonants is extended to most other consonants, with the result that, like the בגדכפת consonants, they take dagesh after a silent shewa or at the beginning of a word when not preceded by a word ending in a vowel and a conjunctive accent (Morag 1959; Blapp 2018). The dagesh in these consonants represented gemination (Yeivin 1983; Khan 2017). Further details of this system of marking dagesh will be given in §I.3.3. What is significant here is that the extension of dagesh to consonants other than בגדכפת in Non-Standard Tiberian manuscripts does not include the pharyngeals, which in the vast majority of cases do not take dagesh. This reflects the difficulty of geminating these consonants. A dagesh is found only very sporadically marked on het in Non-Standard Tiberian manuscripts, e.g.

Genizah manuscripts

חַייֵם (T-S A13.20, Blapp 2017, 163; 2018, 143 | L [BHS]: חַייֵם Psa. 69.29 'the living').

European manuscripts

קּמְּתְּהְמְתְּהְ (Codex Reuchlinianus, Morag 1959, 219 | L [BHS]: מְלְחַמְתְּהָ 2 Sam. 11.25 'your fighting')

⁸⁵ Long version, edition in vol. 2 of this book, §II.L.1.3.5.

This may have been a strategy for ensuring that the letter was read correctly and did not lose its consonantal pronunciation, rather than marking gemination. The *rafe* sign is occasionally used with a similar function in Non-Standard Tiberian manuscripts. As in some other contexts in Non-Standard Tiberian manuscripts, the *rafe* here marks the letter as consonantal but not geminated, e.g.

```
זְּבְּתְּדֹּוּ (Blapp 2017, 175 | L [BHS]: נְבְּתְדֹּוּ Psa. 69.6 'they are [not] hidden')
```

Both of these strategies for ensuring that the letter is read and not weakened are found in Palestinian vocalization, e.g.

Dagesh

```
לֹחֹיֹה (Fassberg 1987, 84 | L [BHS]: לֶּחֶיָּה Lam. 1.2 'her cheek')
```

Rafe

```
î (T-S 12.195, Kahle 1930, 82-84 | L [BHS]: נָאֵלֶחוּ Psa. 53.4 'they have become corrupt')
```

The potential vulnerability of *het* to weakening is reflected in Non-Standard Tiberian manuscripts by the practice of marking a *shewa* sign under the letter in word-final position. The purpose of this was to draw attention to the fact that they are consonants closing a syllable and are not to be weakened and read as vowel letters, e.g.

Genizah manuscripts

```
ְחָבְּשְבַּחְ (T-S A11.1, Blapp 2017, 48 | L [BHS]: חָבָּשְׁבַּחְ Job 39.14 'and she forgot')
```

```
ָלְנַצַּח (T-S A13.18, Blapp 2017, 127 | L [BHS]: לָנֵצַח Psa. 89.47 'forever')
```

European manuscripts

```
וַיִּבְּבֶּחְ (Codex Reuchlinianus, Morag 1959, 233 | L [BHS]: אַבְּבֶּח 1 Kings 11.40 'and he fled')
```

זֶרַחְ (ASCNON B.I. 2r, Pilocane 2004 | L [BHS]: זֶרַח 1 Chr. 2.4, 'Zerah')

Within the Standard Tiberian reading tradition a ḥet was prevented from potential weakening in some contexts by lengthening the vowel before it (§I.2.10.), e.g. מְּמְחָיָה [wufˌθaːḥˈjɔː] 'and Pethahiah' (Neh. 11.24), מְחְיֵה [ˌmiːḥˈjɔː] 'reviving' (Ezra 9.8). Another strategy to protect the consonantal pronunciation of ḥet at the end of a word-internal syllable was to place a dagesh in the following letter (§I.3.1.11.2.). This is found in some early manuscripts (Yeivin 1980, 295; Ginsburg 1897, 133), e.g.

קּהְקּדָ (JTS ENA 346 | L [BHS]: לַחְמְדָ 'your bread' Ezek. 4.15).

There is clear evidence from the Dead Sea scrolls of the weakening of *ḥet* in some biblical reading traditions in the Second Temple period, especially that of 1QIsa^a. This is reflected by the occurrence of *he* or 'alef where the Masoretic tradition has *ḥet*, e.g.⁸⁶

מהשוכים (1QIsaa 35.27 | L [BHS]: מַחְשָּׁדְּ Isa. 42.16 'darkness')

⁸⁶ Data supplied by Aaron Hornkohl. Cf. also Reymond (2014, 92).

```
ואהללה (1QIsa<sup>a</sup> 37.6 | L [BHS]: וְאַחַלֵּל Isa. 43.28 'and I will profane')

(1QIsa<sup>a</sup> 44.17 | L [BHS]: הֵהֶלָל Isa. 53.10 'he caused him sickness')

(1QIsa<sup>a</sup> 48.6 | L [BHS]: בצצחות Isa. 58.11 'in scorched places')
```

In the modern Samaritan reading tradition *ḥet* has weakened in most contexts to *'alef* or zero (Ben-Ḥayyim 2000, 38–39), e.g.⁸⁷

```
'esəd (L [BHS]: מֶּכֶּה Gen. 24.14 'grace')

'amrā'ēfåt (L [BHS]: מְרַחֶּפֶּת Gen. 1.2 'was hovering')

ruwwi (L [BHS]: רוּחֵי Gen. 6.3 'my spirit')

mār (L [BHS]: מְחָׁר Gen. 30.33 'tomorrow')

wrū (L [BHS]: וְרוּהַ Gen. 1.2 'and the spirit of')
```

The weakening of the pharyngeals reflected in the Dead Sea scrolls and the Samaritan tradition had its roots in the contact of Hebrew with non-Semitic languages, in particular Greek, in the pre-Islamic period. The measures taken to ensure the correct reading of the *het* in the medieval manuscripts described above show that a special effort had to be made to avoid its being weakened in the transmission of the Masoretic biblical reading traditions still in the Middle Ages. Indeed, in the medieval period there is evidence for the weakening of the pharyngeals in Palestinian liturgical poetry (§I.0.9.).

⁸⁷ Data supplied by Aaron Hornkohl.

I.1.9. TET ט) טית (ט)

Emphatic (i.e. pharyngealized, with retracted tongue root and increased muscular pressure) unvoiced alveolar plosive [t^s]

According to $Hid\bar{a}yat\ al$ - $Q\bar{a}ri^{2}$, it was articulated with the tongue tip and the gums. ⁸⁸ In the Karaite transcriptions, it is represented by Arabic $t\bar{a}^{2}$, which was a pharyngealized [t^{5}], e.g.

```
מו של (BL Or 2539 MS B, fol. 131v, 11 | L [BHS]: מַה־טָבוּ

Num. 24.5 'how fair are [your tents]')

(BL Or 2539 MS A, fol. 57r, 8 | L [BHS]: מַבפּּׁׁשׁ Gen.

14.23 'from a thread')
```

בְּמְטַחֲדֵי (BL Or 2539 MS A, fol. 64r, 3 | L [BHS]: בָּמְטַחֲדֵי Gen. 21.16 'like the shots of')

In Greek transcriptions from the pre-Masoretic period, *tet* is represented by Greek *tau*, which was an unaspirated stop [t]. In Latin transcriptions from the pre-Masoretic period it is represented by Latin t, which likewise represented an unaspirated stop [t]. These reflected the unaspirated realization of the *tet*, which is also a feature of Arabic $t\bar{a}^{3}$. Examples:⁸⁹

 $^{^{88}}$ Long version, edition in vol. 2 of this book, §II.L.1.3.7.; ed. Eldar (1980, fol. 10b, lines 67–69).

I.1.10. YOD יוֹד (י)

Palatal unrounded semi-vowel [j]; voiced palatal stop [j] when geminated

Saadya states that the Tiberians pronounced *yod* with *dagesh* like Arabic *jīm*:

As for *jīm*, it is in between *gimel* and *yod*. This is why the Tiberians pronounce it [i.e. *jīm*] when (reading) *yod* with *dagesh*. 90

According to the early Arabic grammarians Sībawayhi and al-Khalīl (eighth century C.E.), $j\bar{i}m$ was realized as a voiced palatal stop [j], which had the same place of articulation as the Arabic $y\bar{a}^{\flat}$ (the semi-vowel [j]), so presumably Saadya is referring to the realization of yod with dagesh as [j], e.g. יַּשְׁמֵד [vajjaʃˈme:eð] 'and he destroyed' (1 Kings 16.12), which resulted from the strengthening of the articulation of [j] to a stop. 91

 $^{^{90}}$ ואמא אלג'ים פפי מא בין אלגימל ואליוד, ולד'לך ג'עלהא אלטבראניון פי אליוד אלדגש, commentary on Sefer Yeṣira (ed. Lambert 1891, 42–43).

⁹¹ In some of the early Arabic dialects geminated $y\bar{a}^{5}$ was pronounced like $j\bar{i}m$; cf. Roman (1983, 101–6, 218). Ibn Sīnā in the eleventh century describes $j\bar{i}m$ as pronounced slightly further forward (Roman 1983, 243–46).

In many Non-Standard Tiberian manuscripts, a word-final consonantal *yod* is marked by a lower dot, which can be identified as a *ḥireq* vowel. Occasionally the *yod* is also marked with a *rafe* sign, e.g.

Genizah manuscripts

```
אֱלֹהֵי (T-S A12.1, Blapp 2017, 84 | L [BHS]: אֱלֹהֵי Prov. 30.9 'my God')
```

יַּהָּׁבְּׁי (T-S A13.18, Blapp 2017, 130 | L [BHS]: שְׂבָּהַּי Psa. 89.35 'my lips')

European manuscripts

```
ָּמְצְּרֵיׁ (Codex Reuchlinianus, Morag 1959, 220 | L [BHS]: מָצְרֵיׁ Isa. 1.24 'from my enemies')
```

```
)นี้ (BL Add 21161 | L [BHS]: งันี Joel 1.6 'nation')
```

In Babylonian vocalization, a hireq is marked not only on word-final consonantal yod but also on consonantal yod that occurs within a word, e.g. 92

```
נטׁוֹי (OB, Yeivin 1985, 277 | L [BHS]: נְטְוּי Psa. 102.12 'bent')
```

הגוֹי (OB, Yeivin 1985, 277 | L [BHS]: הַגְּוֹי Jer. 18.8 'the nation')

יהי (OB, Yeivin 1985, 275 | L [BHS]: יֵיְהֵי Ezek. 17.6 'and it became')

חֹייל (MB, Yeivin 1985, 275 | L [BHS]: חַייל Prov. 31.10 'virtue')

⁹² Data supplied by Shai Heijmans.

Another strategy for marking word-final consonantal *yod* that is sporadically found in Non-Standard Tiberian is to write a dot within the body of the letter, which can be identified as a *mappiq* sign, e.g.

```
ּלְפְגֵי (T-S A11.1, Blapp 2017, 51 | L [BHS]: לְפָגֵי Job 41.2 'before me')
```

These strategies for marking word-final consonantal *yod* reflect the perception that the letter was a weak consonant and was vulnerable to being slurred over.

There is some sporadic evidence in various Greek transcriptions from the pre-Masoretic period of the weakening and contraction of yod where it is consonantal in the Masoretic tradition, e.g. 93

Hexapla of Origen (c. 185-254 C.E.)

Final *ay* represented by *eta* possibly reflecting contraction to \bar{e} (Kantor 2017, 234):

 $\omega \epsilon \beta \eta$ (Ambrosiana Palimpsest | L [BHS]: אֹיָבֵי Psa. 35.19 'my enemies')

 σ שוואס (Ambrosiana Palimpsest | L [BHS]: שֿוָאַני Psa. 35.19 'those who hate me')

Septuagint (third century B.C.E.)

Zero representation where consonantal *yod* appears in the Masoretic tradition:

⁹³ Data supplied by Ben Kantor.

```
Άλληλί (Göttingen Septuagint | L [BHS]: הַיַּחְלְאֵלִי Num. 26.26 'Jahleelite')
```

'Aσιηλί (Göttingen Septuagint | L [BHS]: הַיַּחְצָאֵלֶי Num. 26.48 'Jahzeelite')

Έτεβάθα (Göttingen Septuagint | L [BHS]: בְּיִטְבֶתָה Num. 33.33 'Jotbathah')

In some of the biblical Dead Sea scrolls, an 'alef occasionally appears where there is consonantal *yod* in the Masoretic tradition, which reflects weakening, e.g. 94

```
אהרוג (1QIsa<sup>a</sup> 13.3 | L [BHS]: יְהֵרְג Isa. 14.30 'it/he will kill') אהרוג (1QIsa<sup>a</sup> 16.22 | L [BHS]: אַרְיֵה Isa. 21.8 'lion') הראה (1QIsa<sup>a</sup> 18.8 | L [BHS]: אַרְיֵה Isa. 23.3 'nations') גואים (1QIsa<sup>a</sup> 34.23 | L [BHS]: שְׁפָּיִים Isa. 41.18 'hilltops') אואב (4Q98g f1.6 | L [BHS]: אוֹיֵב Psa. 89.23 'enemy')
```

I.1.11. *KAF* (ב, כ, ד)

Kaf with dagesh (2): unvoiced aspirated velar stop [kh]

Kaf without *dagesh* (\supset): unvoiced uvular fricative [χ]

A *kaf* without *dagesh* is frequently, but not regularly, marked by the *rafe* sign in the model Standard Tiberian codices.

⁹⁴ Data supplied by Aaron Hornkohl.

According to $Hid\bar{a}yat$ al- $Q\bar{a}ri$, kaf with dagesh was articulated with 'the middle of the tongue.'95 Kaf without dagesh, on the other hand, was articulated further back, on the posterior 'third of the tongue, which is adjacent to the pharynx, opposite the (soft) palate.'96 In the Karaite transcriptions fricative kaf is represented by Arabic $kh\bar{a}$, which was pronounced as an unvoiced uvular fricative, 97 e.g.

```
لَا خَوْل (BL Or 2539 MS A, fol. 74r, 2 | L [BHS]: לֶאֱבֶּל Gen. 24.33 'to eat')
```

בַּמְבֶּךְ (BL Or 2539 MS A, fol. 68r, 3 | L [BHS]: בַּמְבֶּךְ Gen. 22.13 'in the thicket')

אייי (BL Or 2539 MS A, fol. 63v, 2 | L [BHS]: בְּעֵינֶּיך Gen.

21.12 'in your (ms) eyes')

Greek transcriptions from the pre-Masoretic period represent plosive kaf with the letter χ , which represented an aspirated voiceless velar stop $[k^h]$ until the Byzantine period, rather than κ , which represented an unaspirated [k]. This

⁹⁵ Long version, edition in vol. 2 of this book, §II.L.1.3.6. Ed. Eldar (1980, fols. 10a-10b, lines 61-73).

⁹⁶ Long version, edition in vol. 2 of this book, §II.L.1.3.6. Ed. Eldar (1980, fol. 10a, lines 58-59).

⁹⁷ Roman (1983, 218).

demonstrates that plosive kaf at the time of these transcriptions was aspirated, e.g. 98

Septuagint (third century B.C.E.)

Xαναναῖοι (Göttingen Septuagint | L [BHS]: וְהַכְּנַעֲנֶי Gen. 12.6 'Canaanite')

Χάσαδ (Göttingen Septuagint | L [BHS]: בֶּשֶׂד Gen. 22.22 'Chesed')

Χαλὲβ (Göttingen Septuagint | L [BHS]: בָּלֶב Num. 13.6 'Caleb')

Άσχανὰζ (Göttingen Septuagint | L [BHS]: אַשְּׁבְנֵּז Gen. 10.3 'Ashkenaz')

Hexapla of Origen (c. 185–254 C.E.)

χααφαρ (Ambrosiana Palimpsest | L [BHS]: בְּּטֶפֶּר Psa. 18.43 'like dust')

χαμμα (Ambrosiana Palimpsest | L [BHS]: בַּמָּה Psa. 35.17 'how long/much ... ?')

χελλωθαμ (Ambrosiana Palimpsest | L [BHS]: בַּלּוֹתֶם Psa. 18.38 'wiping them out')

δερχω (Ambrosiana Palimpsest | L [BHS]: צַּׁרְכָּוֹ Psa. 18.31 'his way')

Likewise, in the Tiberian pronunciation tradition, plosive *kaf* was almost certainly aspirated. In the Karaite transcriptions,

⁹⁸ Data supplied by Ben Kantor.

plosive kaf with dagesh is represented by Arabic $k\bar{a}f$, which was an aspirated stop.⁹⁹

 $Hid\bar{a}yat\ al\ Q\bar{a}ri$ describes the stop [kh] as primary ('aṣl) and the fricative [χ] as secondary (far').

I.1.12. LAMED ל) (ל)

Voiced alveolar lateral continuant [1]

In *Hidāyat al-Qāri*' the name of this letter is spelt למאד, which appears to reflect a different pronunciation from that of the normal Hebrew form of the name לָמֶד, with stress on the final syllable.

According to $Hid\bar{a}yat\ al\ Q\bar{a}ri^{3}$, the articulation of this letter involved the contact of the tongue tip with the gums. ¹⁰¹

I.1.13. MEM (ם, מ)

Voiced bi-labial nasal [m]

In Hidāyat al-Qāri the name of this letter is spelt מאם.

⁹⁹ Roman (1983, 55).

Long version, edition in vol. 2 of this book, §II.L.1.3.6. Ed. Eldar (1980, fols. 8b, 10a, 254, n.58). Watson (2007, 43–44) considers the uvular fricative $[\chi]$ in Modern Arabic dialects to be the emphatic counterpart of the dorsal $[k^h]$, involving a primary dorsal and non-primary 'guttural' feature.

¹⁰¹ Long version, edition in vol. 2 of this book, §II.L.1.3.7. Ed. Eldar (1980, fol. 10b, lines 67–69). See the description of *dalet* (§I.1.4.) for a discussion of the passage.

I.1.14. Nun (ן, ג)

Voiced alveolar nasal [n]

According to *Hidāyat al-Qāri*³, it was articulated with the end of the tongue and the gums.¹⁰²

I.1.15. SAMEKH (ס) סָמֶדְ (ס)

Unvoiced alveolar sibilant [s]

In *Hidāyat al-Qāri*² the name of this letter is spelt סמאד, which appears to reflect a different pronunciation from that of the normal Hebrew form of the name סָמֶדְּ, with stress on the final syllable.

According to the medieval sources, it was articulated in the same place as the letter zayin, 103 apparently with the blade of the tongue rather than the tip (see the description of zayin §I.1.7.).

In some medieval Muslim sources, the *samekh* in the name פֿנְחָס 'Phinehas' is transcribed by $s\bar{a}d$ [s^s]: فنحاص (Schreiner 1886, 254). This apparently reflects its pharyngealization after the pharyngeal het.

a vowel, which was articulated entirely in the nasal cavity.

¹⁰² Long version, edition in vol. 2 of this book, §II.L.1.3.7. Ed. Eldar (1980, fol. 10b, lines 67–68). lbn Janāḥ (*Kitāb al-luma*^c, ed. Derenbourg, 27-28) distinguishes between the *nun* with a following vowel, which was pronounced with an admixture of nasal resonance, and *nun* without

¹⁰³ *Hidāyat al-Qāri*², Long version, edition in vol. 2 of this book, §II.L.1.3; ed. Eldar (1980, fol. 10b, line 77); *Sefer Yeşira* (ed. Gruenwald 1971, 147; ed. Hayman 2004, 92–98).

Sporadic examples of the pharyngealization of *samekh* in the environment of pharyngeals is attested in the Dead Sea scrolls, e.g.¹⁰⁴

ועוצותם (4Q76 4.12 | L [BHS]: וְעֵּסּוֹתֶם Mal 3.21 'and you [pl] will trample')

I.1.16. 'AYIN עין (ע)

Voiced pharyngeal fricative [S]

This letter is transcribed by Arabic 'ayn (voiced pharyngeal fricative) in the Karaite transcriptions, e.g.

```
عيناها (BL Or 2539 MS A, fol. 64v, 3 | L [BHS]: يوناها Gen. 21.19 'her eyes')

(BL Or 2539 MS A, fol. 63r, 3 | L [BHS]: المناع (BL Or 2539 MS A, fol. 63v, 3 | L [BHS]: نبماع (BL Or 2539 MS A, fol. 63v, 3 | L [BHS]: نبماع (BL Or 2539 MS A, fol. 63v, 3 | L [BHS]: ببماع (21.12 'hear!')
```

Hidāyat al-Qāri⁷ does not distinguish between the place of articulation of the laryngeals and that of the pharyngeals. Some medieval grammarians, however, state that het and its voiced counterpart 'ayin were articulated less deep in the throat than 'alef and he (see §I.1.8.).

In the Standard Tiberian tradition, 'ayin does not take dagesh. According to Hidāyat al-Qāri', the letter 'ayin could not be

¹⁰⁴ Data supplied by Aaron Hornkohl.

made 'heavy' by *dagesh*,¹⁰⁵ i.e. the consonant could not be pronounced with different degrees of muscular pressure. Also in Non-Standard Tiberian manuscripts, where the use of *dagesh* has been extended, 'ayin does not take *dagesh*.

In Palestinian vocalization *dagesh* is sporadically marked on *'ayin*, it seems as a measure to ensure that it was pronounced correctly and not weakened, e.g.

```
עׁתִי (T-S NS 249.6, Dietrich 1968, 74* | L [BHS]: עַמֶּי 1
Chron. 2.35 'Attai')
```

```
[פּר]עֹּ[ה] (T-S A43.1, Kahle 1930, 94 | L [BHS]: פַּרְעָּׂה
25.19 'Pharaoh')
```

In Non-Standard Tiberian manuscripts, 'ayin is occasionally marked with a *rafe* sign, marking the letter as consonantal but not geminated, e.g.

```
קֿעַרֶּדְ (T-S A13.18, Blapp 2017, 140 | L [BHS]: יַּעֲרָדְּ Psa. 89.7 'is comparable')
```

```
קלְּעֶּם (T-S A13.20, Blapp 2017, 177 | L [BHS]: לְּעָּם Psa. 68.36 'to the people')
```

The *rafe* sign is occasionally found on 'ayin also in Palestinian vocalization, e.g.

```
עיני (T-S NS 249.3, Dietrich 1968, 128 | L [BHS]: טֵינֵי Psa. 77.5 'my eyes')
```

 $^{^{105}}$ *Hidāyat al-Qāri*', Long version, edition in vol. 2 of this book, §II.L.1.3.2., §II.L.1.3.3.

In many Non-Standard Tiberian manuscripts a word-final *'ayin* is marked with *shewa*, indicating that it was a consonant that closed a syllable, e.g.

Genizah manuscripts

```
תּוֹדֵע (T-S A13.18, Blapp 2017, 127 | L [BHS]: הוֹדֵע Psa. 90.12 'teach!')

(T-S A13.20, Blapp 2017, 156 | L [BHS]: רְשֵׁע Psa. 71.4 'wicked')
```

European manuscripts

```
וְיִּשְּׁמְעְ (Codex Reuchlinianus, Morag 1959, 233 | L [BHS]: יַּשְּׁמְע 2 Sam. 22.7 'and he heard')
```

הָרֶעְ (ACAMO 28 2v, Pilocane 2004, 29 | L [BHS]: הָרֶע 'evil' 1 Kings 16.25)

The use of *dagesh*, *rafe* and *shewa* in the manuscripts with Non-Standard Tiberian and Palestinian vocalization reflect the perceived vulnerability to weakening of the 'ayin. Similar strategies of vocalization were also used for other gutturals in these manuscripts (§I.1.1, §I.1.5., §I.1.8.).

Within the Standard Tiberian reading tradition a 'ayin was prevented from potential weakening in some contexts by lengthening the vowel before it (§I.2.10.), e.g. שְׁמְשִׁיְהוּ [ʃaˌmaːʕˈjɔːhuː] 'Shemaiah (2 Chron. 11.2), שְׁמֵע־בָּא [ʃaˌmaːʕ-ˈnɔː] 'listen' (1 Sam. 28.22). Another strategy to protect the consonantal pronunciation of 'ayin at the end of a word-internal syllable was to place a dagesh in the following letter (§I.3.1.11.2.). This is found in some early manuscripts (Yeivin 1980, 295; Ginsburg 1897, 133), e.g.

```
C: יַעִּקְּב (L [BHS]: יַעָקֶּב 'he supplants' Jer. 9.3)
```

There is clear evidence from the Dead Sea scrolls of the weakening of 'ayin in some biblical reading traditions in the Second Temple period, especially that of 1QIsaa. This is reflected, for example, by the omission of 'ayin where it occurs in the Standard Tiberian Masoretic Text, or its replacement by 'alef or he, e.g. 106

```
יבור (1QIsa² 22.19 | L [BHS]: K ישֶב'ר עבר עבר Isa. 28.15 '[the flood/whip] shall pass')
```

משתריים (1QIsa² 22.26 | L [BHS]: מֱהֶשְּׂהָרֵעַ Isa. 28.20 '[is too short] to stretch out')

ארעב (5Q6 f1v.6 | L [BHS]: זַלְעֲפָּוֹת רָעֲב Lam. 5.10 'fever from hunger')

נטה (4Q27 f24ii+27–30.18 | L [BHS]: נטה Num. 24.6 '[Yhwh] planted')

מסלה (1QIsa^a 13.17 | L [BHS]: מְּחֲלַע Isa. 16.1 'from Sela')

ואתה (1QIsa^a 4.16 | L [BHS]: וְשֶׁתֵּה Isa. 5.5 'and now')

אצית (1QIsa^a 19.27 | L [BHS]: עצוֹת Isa. 25.1 'counsel')

In the modern Samaritan reading tradition 'ayin has weakened in most contexts to 'alef or zero (Ben-Ḥayyim 2000, 38–39), e.g.¹⁰⁷

'az (L [BHS]: עַל Lev. 3.12 'goat')

¹⁰⁶ Data supplied by Aaron Hornkohl. Cf. also Reymond (2014, 92).

¹⁰⁷ Data supplied by Aaron Hornkohl.

yišmaٌ u (L [BHS]: יִשְׁמְעֹּוּ Gen. 11.7 'they will (not) understand')

miyyūlåm (L [BHS]: מֵעוֹלֵם Gen. 6.4 'of old')

šār (L [BHS]: שֵׁעֱר Gen. 25.25 'hair')

šū (L [BHS]: พุ่ม Gen. 38.2 'Shua')

The measures taken to ensure the correct reading of the 'ayin in the medieval manuscripts described above show that a special effort had to be made to avoid its being weakened in the transmission of the Masoretic biblical reading traditions still in the Middle Ages.

I.1.17. PE פַּה (ρ, η)

Pe with dagesh (a): unvoiced aspirated bi-labial stop [ph]

Pe without dagesh (a): unvoiced labio-dental fricative [f]

A *pe* without *dagesh* is frequently, but not regularly, marked by the *rafe* sign in the model Standard Tiberian codices.

In Masoretic treatises the name of this letter is sometimes spelt פי or פי 108 . פא or פי

According to $Hid\bar{a}yat$ al- $Q\bar{a}ri$, pe with dagesh was pronounced by closing the lips firmly and pe without dagesh was pronounced by closing the lips lightly. Taken by itself, this could be a description of a bilabial articulation $[\Phi]$. This appears,

 $^{^{108}}$ E.g. $Hid\bar{a}yat~al\text{-}Q\bar{a}ri^{2}$, short version, edition in vol. 2 of this book, §II.S.1.7.

 $^{^{109}}$ Long version, edition in vol. 2 of this book, §II.L.1.3.9.; ed. Eldar (1980, fols. 10b-11a, lines 84-88).

however, to be only a partial description of the sound, as is the case with the description of *bet* without *dagesh* (see §I.1.2.). The light closure of the lips would have accompanied a labio-dental articulation [f] and no doubt it is this secondary feature that the author refers to.¹¹⁰

We know from Greek and Latin transcriptions that in the pre-Masoretic period plosive pe was aspirated.¹¹¹ This is shown by the fact that it is represented in Greek by ϕ , which in the periods in question represented an aspirated stop $[p^h]$, and in Latin by the digraph ph, the h reflecting aspiration $[p^h]$. Greek π and Latin p represented unaspirated [p]. Examples:¹¹²

mesphat (Jerome, *Commentary on Isaiah*, ed. Gryson, II.42.6 | L [BHS]: לְמִשְׁפָּטֹ Isa. 5.7 'judgment')

Saadya refers to the existence of a 'hard pe' (al-fa' al-sulba) in the hapax legomenon 'his palace' (Dan. 11.45), which he describes as 'between bet and pe with dagesh'. This appears to be referring to an unaspirated, fortis realization of [p]. One may infer from this that the normal unvoiced stop pe was aspirated also in the Middle Ages. Dunash ibn Tamim reports that the

 $^{^{113}}$ פי מא בין אלבי ואלפי אלדגש, Commentary on Sefer Yeşira (ed. Lambert 1891, 42).

scholar Isaac Israeli (ninth-tenth centuries), who was 'an expert in the reading of the Tiberians', pronounced the *dalet* in this word like an Arabic $\underline{d}\bar{a}$ ', i.e. as emphatic (pharyngealized).¹¹⁴ This implies that the 'hard' *pe* was also emphatic, the *dalet* being pronounced emphatic by assimilation (Steiner 1993).

The word אַפַּדְנוֹ is a loanword from Old Persian. The source word in Old Persian is reconstructed by Iranists as apadana, $\bar{a}pad\bar{a}na$ or $appad\bar{a}na$ 'palace, audience chamber'. The p in Old Persian was unaspirated. The lack of aspiration was preserved when the word was loaned into Hebrew and this was transmitted in the Tiberian oral tradition down to the Middle Ages. There is no consensus among Iranists about the length of the initial vowel in the Old Persian word and whether the p was geminate or not (Ciancaglini 2008, 113–14). According to Henning (1944, 110 n.1), the p was originally geminated but the gemination of the Old Persian p was lost in Middle Persian (Old Persian appad $\bar{a}n > 1$ Middle Persian *āpaðan). In the Tiberian tradition, the pe is geminated, which could, therefore, be an ancient feature. The antiquity of the gemination is shown, moreover, by the fact that the Old Persian word appears as a loanword in an Akkadian text datable to the Late Babylonian period where the *p* is represented as geminated: ap-pa-da-an (appadān).115

-

¹¹⁴ Dunash ibn Tamim, *Commentary on Sefer Yeṣira* (ed. Mann 1931, 1:670, n.106). For this passage see §I.1.4.

¹¹⁵ The Assyrian Dictionary of the Oriental Institute of the University of Chciago, A/2 (1968), Chicago: Oriental Institute, 178.

There is evidence for the unaspirated pronunciation of the pe in this word in Greek and Latin transcriptions in the pre-Masoretic period, e.g. 116

Aπαδανω (Theodoretus, fifth century C.E., *Commentarius in Visiones Danielis Prophetae*, e.g. Migne, 81.1532)

apedno (Jerome, fourth century C.E., *Commentarii in Danielem*, ed. Glorie, IV.11)

In these transcriptions the pe is represented by Greek π and Latin p without following h, both of which represented unaspirated [p]. Jerome (*Commentarii in Danielem*, IV, 11–12) comments on the pe in this word as follows:

Notandum autem quod cum pe littera hebraeus sermo non habeat, sed pro ipsa utatur phe cuius uim graecum ϕ sonat, in isto tantum loco apud Hebraeos scribatur quidem phe sed legatur pe.

But it should be noted that while Hebrew speech does not have the letter pe (i.e. Latin p [p]), but instead of it uses phe, the force of which is approximated by the sound of Greek φ (i.e. [ph]), in that particular place (i.e. Dan. 11.45) among the Hebrews phe (i.e. \mathfrak{p} [ph]) indeed is written but it is read as pe (i.e., Latin p [p]).

It should be noted, however, that some Greek transcriptions are extant that represent the pe in the word by ϕ , reflecting an aspirated pronunciation, e.g.

εφαδανω (Theodotion, second century C.E.)

¹¹⁶ Data supplied by Ben Kantor.

εφαδανω/αφαδανω (Polychronios, fifth century C.E., Commentarii in Danielem, ed. Moutsoulas, 11.45)

This suggests that there were variant traditions of reading the *pe*, some preserving the unaspirated *pe* others pronouncing the *pe* as aspirated.

Another feature of all the Greek and Latin transcriptions cited above is that they represent the *pe* as ungeminated, whereas it is geminated in Tiberian tradition.

The word appears in various dialects of Aramaic, including Syriac, Jewish Babylonian Aramaic and the Aramaic of Targum Jonathan (Sokoloff 2009, 81, 2002, 154). In Syriac, where there is a reliable tradition of vocalization, the pe is ungeminated: $\langle \bar{a}padhn\bar{a} \rangle$. There are, however, variant vocalizations of the word in the sources (Payne Smith 1879, 329–30). In some manuscripts, the pe is marked with a diacritic that is used elsewhere to represent the pe corresponding to an unaspirated π in Greek loanwords (J. B. Segal 1989, 489). The word appears in Arabic as fadan 'palace'.

The pe in in the Tiberian reading tradition was pronounced not only unaspirated but also pharyngealized. Elsewhere in the sound system of Tiberian Hebrew unaspirated unvoiced stops were pharyngealized, i.e. tet and qof. The feature of lack of aspiration did not exist in unvoiced stops without pharyngealization. Pharyngealization was, therefore, perceived to be the closest equivalent in the sound system of Tiberian Hebrew to the feature of lack of aspiration of the pe. This also applied to the sound system of the spoken language of the tradents of the reading tradition. At the time of Saadya and Isaac

Israeli, who report this feature, the spoken language was Arabic, in which unvoiced unaspirated stops were pharyngealized (i.e. the $t\bar{a}$) and the $q\bar{a}f$). It is not clear whether the pharyngealization of the pe in אַפּּדְנֹוֹ existed in the reading tradition in the pre-Islamic period. Greek unaspirated τ and κ , likewise, were perceived to correspond most closely to Hebrew emphatic tet and qof, as shown by Greek transcriptions of Hebrew, e.g. Λώτ (Septuagint, שֵּנֵק Gen. 11.27 'Lot'), Ένάκ (Septuagint, פרסטלון Deut. 9.2 'Anak') and by Greek loanwords in Hebrew, e.g. τ (Copper Scroll 3Q15), קיתרוס (tetiv) 'zither' tillet tillet

A Masoretic note to Dan. 3.21 in L reads as follows ג מפל פֿ בפומיהון וסימנהון פסנתרין פטשיהון אפדנו משנין לקראה גֹ מפל פֿ בפומיהון איי

The meaning of this is not fully clear. One possible interpretation is as follows:

There are three cases where *pe* is pronounced differently by the reader, namely פְּסֵנְתֵּרִין 'stringed instrument' (Dan. 3.5, 3.7, 3.10, 3.15), פֿטישיהון 'their tunics' (*ketiv* פּטישיהון Dan. 3.21), אַפּדנוֹ 'his palace' (Dan. 11.45).

This suggests that the *pe* also of the words פְּסִנְתֵּרִין, which occur in the Aramaic section of the Bible, were pronounced unaspirated. The word פְּסִנְתֵּרִין is a loan from Greek ψαλτήριον, so the *pe* would correspond to the unaspirated segment in the affricate ψ [ps]. The word פַּסְשֵׁיהֹון is of uncertain etymology, but it has been suggested by Nyberg (1931, 187) that the source is Old Persian *patuš 'garment', in which case the *pe* would correspond to an Old Persian unaspirated *p*. The *tet* in the word would, moreover, reflect the Old Persian unaspirated *t*.

It should be noted that there are a number of other Old Persian loanwords in Biblical Hebrew in which a Hebrew pe corresponds to an unaspirated p in the Old Persian source word but which were pronounced aspirated in the Tiberian Hebrew reading tradition, e.g. אֲחַשְּׁדֵּרְפְּנִים 'satrap' (< Old Persian xšaθra-pāwan) (Esther 3.12, 8.9, 9.3; Ezra 8.36), בַּחְשָׁנֵן 'message' (< Old Persian *patiy-gama) (Ecc. 8.11; Esther 1.20), פַּחְשֶׁנֵן 'a copy' (< Old Persian *patiy-caγniya or *patiy-caγna) (Esther 3.14, 4.8, 8.13) (Gindin 2013). It would appear that in such cases the original unaspirated p was adapted to the sound system of Hebrew. Greek transcriptions such as εφαδανω (Theodotion, second century C.E.) and εφαδανω/αφαδανω (Polychronios, fifth century C.E.), cited above, would reflect a similar adaption of the pe also in the word in some reading traditions.

I.1.18. ṢADE (ץ, צ')

Unvoiced emphatic (pharyngealized) alveolar sibilant [s¹]

The name of the letter is vocalized אָדֵי in a Masoretic treatise (ed. Allony and Yeivin 1985, 102), with *shewa* in the initial syllable, reflecting a pronunciation with stress on the final syllable.

According to the medieval sources, it was articulated in the same place as the letters zayin and samekh, ¹¹⁷ apparently with the blade of the tongue rather than the tip (see the description of zayin §I.1.7). In the Karaite transcriptions, it is represented by

¹¹⁷ *Hidāyat al-Qāri*, Long version, edition in vol. 2 of this book, §II.L.1.3.8.; ed. Eldar (1980, fol. 10b, line 77), *Sefer Yeṣira* (ed. Gruenwald 1971, 147; ed. Hayman 2004, 92–98).

Arabic $s\bar{a}d$, which was an unvoiced pharyngealized alveolar sibilant [s^s], e.g.

In §I.1.7. references are given to what appears to have been a voiced emphatic variant of *ṣade* [z^{s}].

A Karaite transcription is extant in which Arabic *sīn* is written where the Masoretic Text has *ṣade*, reflecting the weakening of the emphatic pronunciation:

```
ecc. 10.8 (BL Or 2555 fol. 111v, 3 | L [BHS]: וּפֹרֵץ Ecc. 10.8 (and he who breaks')
```

I.1.19. QoF קוֹף (ק)

Unvoiced advanced uvular unaspirated plosive [q]

According to $Hid\bar{a}yat$ al- $Q\bar{a}ri$, qof was articulated with the 'middle of the tongue', and so further forward than fricative gimel and kaf, which were pronounced with the 'back third of the tongue'. This suggests an advanced uvular point of articulation. In the Karaite transcriptions, this letter is represented by Arabic $q\bar{a}f$, e.g.

¹¹⁸ Long version, edition in vol. 2 of this book, §II.L.1.3.6.; ed. Eldar (1980, fols. 10a–10b, lines 61–72).

According to the medieval Arabic grammarians, $q\bar{a}f$ was unaspirated and articulated between the velar stop $k\bar{a}f$ and the uvular fricatives $kh\bar{a}^{7}$ and ghayn (Roman 1983, 110), i.e. in advanced uvular position. It is the emphatic counterpart of the dorsal velar stop $k\bar{a}f$ (Jakobson 1978; Watson 2007, 43–44).

The lack of aspiration of *qof* is reflected by Greek and Latin transcriptions from the first half of the first millennium C.E. In these the letter is transcribed by Greek \varkappa and Latin c or g, which represented unaspirated stops, e.g.¹¹⁹

I.1.20. *RESH* (ר)

(i) Voiced advanced uvular trill [n, n] or advanced uvular frictionless continuant [n, n] and (ii) pharyngealized apico-alveolar trill [n, n]

According to $Hid\bar{a}yat\ al\ Q\bar{a}ri^{\flat}$, the Tiberians pronounced resh in two different ways, as was the case with the letters בגדכפת.

Its basic articulation was with 'the middle third of the tongue', as was the case with *qof* and plosive *kaf*, suggesting an advanced uvular position. It is not made clear whether it was a trill $[\Bar{R}]$ or frictionless continuant $[\Bar{R}]$. In what follows, it will be transcribed as an advanced uvular trill $[\Bar{R}]$.

The secondary pronunciation of *resh* is said in the medieval sources to occur in the environment of the alveolar consonants and can be inferred to be an apical alveolar trill. It is described by *Hidāyat al-Qāri* as being intermediate in status

 $^{^{120}}$ *Hidāyat al-Qāri*³, Long version, edition in vol. 2 of this book, §II.L.1.3.6.; Eldar (1984a).

(manzila bayna manzilatayn 'grade between two grades'), i.e. intermediate between the simple primary resh, which is described as 'light' (khafīf), and geminated resh marked with the dagesh sign in the Tiberian vocalization, which is termed 'major resh' (al-resh al-kabīr). 121 When contrasting it with the primary resh, Hidāyat al-Qāri³ describes the secondary resh as having the feature of 'heaviness' (thigal) whereas the simple resh has the feature of 'lightness' (khiffa). 122 The intermediate status of the secondary resh, therefore, can be identified as being an intermediate degree of muscular tension, between the light advanced uvular resh and the maximal degree of muscular tension brought about by the gemination of the resh. The instances of geminated resh marked with dagesh in the Standard Tiberian reading tradition appear to have lengthened forms of the primary resh, i.e. advanced uvular trills. They do not occur in the contexts that are said to condition the secondary alveolar resh. So geminated resh a may be transcribed [RR], e.g. הרעמה [harrisi:'mo:ch] 'to irritate her' (1 Sam. 1.6).

_

¹²¹ *Hidāyat al-Qāri*³, Long version, edition in vol. 2 of this book, §II.L.1.9.6.; Eldar (1984a).

¹²² Hidāyat al-Qāri', Long version, edition in vol. 2 of this book, §II.L.1.9.5., §II.L.1.9.7. The Hebrew Maḥberet ha-Tījān (ed. J. Derenbourg 1871, 81) states that the Tiberians pronounced this resh strongly (מחוקים). An anonymous Masoretic treatise preserved in the Genizah fragment CUL T-S NS 311.113 states that the Tiberians pronounced the resh with dagesh (ידגשוהא), but 'in our country we do not know (this pronunciation)'. This is presumably referring to the Tiberain secondary resh.

We know from various sources that the Hebrew letter *resh* had two different types of pronunciation in the Middle Ages. The earliest text referring to this is *Sefer Yeşira*:

There are seven double letters, בג"ד כפר"ת. These are pronounced in two ways, which are two opposites—soft and hard, a strong structure as opposed to a weak one. 123

In his commentary on *Sefer Yeṣira*, Saadya discusses the double pronunciation of the Hebrew *resh*. He states that the letters בגדכפרת are called double ($mud\bar{a}^cafa$) 'because each of the letters is pronounced with two pronunciations, a hard pronunciation and a soft pronunciation'. He refers to a difference between the Tiberian and Babylonian pronunciations of *resh*:

As for the double nature of the *resh*, the Tiberians have it in their reading of the Bible, whereas the Iraqis have it in their speech but not in their reading of the Bible. They call one type *resh makrūkh* and the other *ghayr makrūkh* ('not *makrūkh*'). As for the customs of the Iraqis in this matter, we have examined them but have found no principle uniting them. As for the customs of the Tiberians, we shall mention them in the commentary on the fourth part of this book.¹²⁵

 $^{^{123}}$ שבע כפולות בג"ד כפר"ת ... ומתנהגות לשונות כפולות שלתמורות: בית בית, גימל שבע גימל, דל דל, כף כף, פה פה, ריש ריש, תיו תוי כנגד רך וקשה תבנית גיבור כנגד חלש (ed. Gruenwald 1971, 156; ed. Hayman 2004, 54). For variant versions see Hayman (2004, 51, 127).

וצות ליין 124 (ed. Lambert 1891, 29). און כל חרף מנהא ליין צות לשן וצות ליין 124 (

¹²⁵ ואמר תצאעף אלריש פאנה ללטבראניין פי אלמקרא, וללעראקיין פי כלאמהם לא פי פאמא רסום אלעראקיין פי דֹלך. אלמקרא, ויקולון הדא ריש מכרוך וריש גיר מכרוך

Elsewhere in his commentary on *Sefer Yeṣira* Saadya refers to the 'hard' *resh* as *resh dagesh* and the 'soft' *resh* as *resh rafe*. 126

The word *makrūkh*, which is used by Saadya in the passage cited above, has been interpreted by scholars in various ways. 127 The most satisfactory interpretation is that it is an Arabicized form of the Hebrew word בְּרוֹּדְ 'wrapped up, closed up', analogous to the forms *madgūsh* 'with *dagesh*' and *marfī* 'with *rafe*', which are widely attested Arabicizations of the Hebrew terms בְּרוֹּדְ and בְּרוֹּדְ The term בְּרוֹּדְ is found in Masoretic sources in reference to closed syllables, as in the following passage from *Diqduqe ha-Te'amim*:

אם לשון ברכה עם בי״ת משוכה ובו הטעם תמוכה לעולם היא כרוכה כמו והתבֶּרְכו בו ... ואם על כ״ף טעמו יפתח נאמו ובלשון ינעימו כמו ואבְרַכְה

פאלתמסנאהא פלם נגד להא אצלא יגמעהא. ואמא רסום אלטבראניין פאנא נדכרהא פי פאלתמסנאהא פלם נגד להא אצלא יגמעהא. (ed. Lambert 1891, 46). In part four Saadya describes how the hard resh occurs in certain phonetic environments (see below).

¹²⁶ Ed. Lambert (1891, 79). In some medieval sources describing the two different types of Tiberian *resh* the terms *dagesh* and *rafe* are confused. This is the case, for example, in *Diqduqe ha-Ṭeʿamim* (ed. Baer and Strack 1879, §7) and the Hebrew *Maḥberet al-Tījān* (ed. J. Derenbourg 1871, 138). According to Revell (1981, 133) this confusion arose from the fact that in the few cases where the *dagesh* sign is marked in the *resh* in the Tiberian text, the *resh* is not preceded by the letters דוצחטלן nor is it followed by ל. A *resh* that did occur in the environment of these letters was, therefore, considered to be *rafe*. Such sources, or the versions that have come down to us, must have been written by scribes who had no direct knowledge of the Tiberian pronunciation tradition.

¹²⁷ Morag (1960, 217–19).

מְבֶרֲכֵידְּ ... חוץ מאחד במקרא מיוחד כי על כ״ף טעמו ולא יפתח בנאמו מנדעי עלי יתוב ולעלאה בַּרְכֵת

If a form of the root בר״ן has a bet with a vowel and the accent falls on it (i.e. the bet), it is always pronounced 'closed up' as in יְיִתְבֵּרְכוּ בִּיוֹ 'and may they bless themselves by him' (Psa. 72.17) ... But if the accent falls on the resh, it is opened up in speech and pronounced with a vowel as in יַּאַבְּרֵכָהֹ מְבֵּרְכָּיֹךְ and I will bless those who bless you' (Gen. 12.3) ... Except for one word, which is unique in the Bible, for its accent falls on the kaf but it is not opened up in speech: וֹמַגְּדְעִי יְּתִוֹנְ יִלְיִי יְתִוֹנִם וֹלְעִלְּאָהֹ בְּרְבַׁת and my reason returned to me and I blessed the Most High' (Dan. 4.31). 128

In this passage, the term כרוך is used to describe forms in which a *shewa* is silent, i.e. the *shewa* coincides with the closure of the syllable. The opposite of כרוך is when יפתח בנאם, which literally means 'it is opened up in speech'. This refers to the fact that the *shewa* is vocalic.

In the phrase *resh makrūkh*, the term is a calque of the Arabic phonetic term *muṭbaq* (literally 'closed, covered'), which was used in the medieval Arabic grammatical tradition to refer to emphatic consonants, i.e. pharyngealized consonants.¹²⁹ A non-emphatic letter was referred to in the Arabic grammatical tradition by the term *munfatiḥ* 'open'. The description of the Arabic emphatic letters by the grammarian Sībawayhi (eighth century C.E.) is as follows:

 $^{^{128}}$ Ed. Baer and Strack (1879, §53). For variant texts of this passage see ed. Dotan (1967, 140, 263).

¹²⁹ For details see Khan (1995).

When you position your tongue in the places of articulation of these four (emphatic) letters, your tongue forms a cover/closure extending from their place of articulation until the palate. You raise the back of the tongue towards the palate and when you have positioned your tongue thus, the sound is compressed between the tongue and the palate up to the place of articulation of the letters.¹³⁰

The terminological opposition between יפתח בנאם and יפתח בנאם in the passage from Diqduqe ha-Ṭeʿamim above would, therefore, be directly parallel to the contrasting pair of terms muṭbaq vs. munfatiḥ, which designated emphatic vs. non-emphatic consonants.

This variant of resh, therefore, was pronounced pharyngealized. Evidence for such an interpretation is found in the report by Dunash ibn Tamim that his teacher Isaac Israeli (tenth century), 'an expert in the Tiberian reading tradition', pronounced the dalet in the word וְיַבְּרְכָּוּ 'and they bent' (Jer. 9.2) like the pharyngealized Arabic letter $d\bar{a}d$ (וֹיצֹרכּו אַת לשונם), by which he meant a pharyngealized voiced interdental [ðˁ]. This must have arisen by the spreading the pharyngealization of the contiguous resh. 131

In a fragment of a Masoretic treatise datable to the tenth century, it is stated that this variant of *resh* 'is pronounced with a turning of the tongue' (*yuqāl bi-taqallub al-lisān*).¹³² This seems

وهذه الحروف الأربعة اذا وضعت لسانك في مواضعهن انطبق لسانك من مواضعهن الى ما حاذى 130 الحنك الأعلى من اللسان ترفعه الى الحنك فاذا وضعت لسانك فالصوت محصور في ما بين اللسان المحنك الأعلى من اللسان ترفعه الى الحنك الى موضع الحروف al-Kitāb, ed. Derenbourg (1889, 455).

¹³¹ For this passage see §I.1.4.

¹³² Allony (1973, 102, text line 28).

to be referring to the retroflection of the tongue tip (Khan 1995, 79). Retroflection of the tongue tip is a feature often associated with pharyngealized alveolar r in modern spoken Semitic languages.¹³³

The references to the 'heavy' or 'hard' pronunciation of the secondary *resh* and its association with the term *dagesh* (e.g. Saadya *resh dagesh*), can be correlated with the fact that pharyngealized *r* was pronounced with greater muscular tension.

According to $Hid\bar{a}yat~al\text{-}Q\bar{a}ri^{\flat}$ and other medieval sources, this apico-alveolar pharyngealized resh occurred when it is preceded by the consonants דוצתטסלן or followed by \dagger and when either resh or one of these consonants has $shewa.^{134}$ This can be reformulated as the rule that alveolar resh occurs when one of the following conditions holds:

- (i) Resh is in immediate contact with a preceding alveolar, e.g. מַּצְרֵף [bamiz'r^ɛ:] 'with a pitchfork' (Jer. 15.7), מַּצְרֵף [mas'r'e:ef] 'crucible' (Prov. 17.3).
- (ii) *Resh* is in the same syllable, or at least the same foot, as a preceding alveolar, e.g. דַּרְבָּוֹ [dar^{sı}kʰoː] 'his way' (Gen. 24.21), מַרְבֵּי [t^sar^{sı}pʰeː] 'the leaves' (Ezek. 17.9). The condition applies also to a *resh* in word-final position that is in the same syllable or at least the same foot as an alveolar,

 $^{^{\}rm 133}$ E.g. in Neo-Aramaic dialects (Khan 2008, 32).

¹³⁴ *Hidāyat al-Qāri*³, Long version, edition in vol. 2 of this book, §II.L.1.9.4., §II.L.1.9.7.; Saadya, *Commentary on Sefer Yeşira* (ed. Lambert 1891, 79); Masoretic treatise attributed to Yehudah ha-Nazir (ed. Allony, 104, text lines 51-56).

although the resh is not marked with a shewa in such cases, e.g. שֶׁר [sar^s] 'commander of' (1 Sam. 18.13), לְמָטֵר [lim't^ca:ar^c] 'by the rain' (Deut. 11.11).¹³⁵ A consonant with vocalic shewa is treated as belonging to the same foot as the following resh in the metrical structure of the phonetic realization of the word (§I.2.5.2.), e.g. צרופה [(sˤa.rˤuː.)(ˈfɔː)] 'refined' (2 Sam. 22.31), where feet are enclosed in round brackets and syllable boundaries are marked by dots. Likewise, as can be seen from the transcription למטר [lim't'a:ar'], a closed syllable containing a long vowel has an epenthetic vowel of the same quality following the long vowel. It will be argued, however, that it is nevertheless in the same prosodic foot, viz. $[(\lim.)(^{t}f^{\alpha}..ar^{\beta})]$ (§I.2.4.). On the phonetic level, therefore, the resh is strictly not in the same syllable as the alveolar in forms such as צָרוֹפָׂה [ssa.rsu: fo:] and למטר [lim. tsa:.ars]. The conditioning factor for the emphatic allophone of the *resh* is that it occurs in the same foot as a preceding alveolar.

Elsewhere *resh* had an advanced uvular realization, e.g. בֶּבֶב [ˈឆฺɛːxɛv] 'chariotry' (Exod. 14.9), מַרְאֶה [ma¤̩ˈʔɛː] 'appearance'

¹³⁵ These last two examples are cited by Saadya, *Commentary on Sefer Yeṣira* (ed. Lambert 1891, 79).

(Gen. 12.11), שֶׁמֶר [∫ɔːˈma:aṣ̩] 'he kept' (Gen. 37.11), אֶּרְדִּיֹף (Ṣɛ̞r̩ˈdoːof] (Psa. 18.38).

As can be seen in (ii) above, Saadya cites the example שַׁר [sar^c] with *sin*. The letter *sin* (שׁ), therefore, also conditioned the occurrence of the pharyngealized *resh* in the appropriate contexts, although it is not explicitly mentioned in the list of conditioning consonants in the medieval sources, which includes only The letters *sin* and *samekh* had the same realization [s]. The written letter *sin* was considered to have *samekh* as its *qere* (§I.0.8.).

Pharyngealized *resh* is not unknown in modern reading traditions, e.g. in the tradition of Morocco (with the exception of Tetouan) *resh* may be realized as an emphatic alveolar trill $[r^s]$, generally in the environment of a or u or an emphatic consonant

This pharyngealization, moreover, may spread to adjacent consonants, e.g.

```
is<sup>°</sup>r<sup>°</sup>a'il (Akun 2010, 72 | L [BHS]: יְשְׂרָאֵׁל Exod. 15.1 'Israel')
jar<sup>°</sup>'d<sup>°</sup>u (Akun 2010, 72 | L [BHS]: יְרָדָּוּ Exod. 15.5 'they went down')
```

In Jewish Palestinian Aramaic sources from the pre-Masoretic period, an a or i vowel sometimes shifts to a rounded vowel represented by vav in the orthography. This occurs in particular in a syllable closed by a labial consonant or resh, e.g. גוברא ($< *gavr\bar{a}$), 'man', בוברא ($< *rams\bar{a}$) 'evening', חורעא ($< *tar^c\bar{a}$) 'door', יורדעא ($< *yarden\bar{a}$) 'Jordan' (Dalman 1894, 65). A similar

vowel shift is attested in Christian Palestinian Aramaic, Samaritan Aramaic and also Palestinian Rabbinic Hebrew (Ben-Ḥayyim 1946, 194–96; Kutscher 1979, 496–97; Mishor 1998). Rounding of a vowel in the environment of labials is a natural development. The motivation for the rounding and backing in the environment of *resh* is not so clear, but could reflect a pharyngealized pronunciation of *resh*. Pharyngealized consonants involve the retraction of the tongue and consequent lip-rounding. ¹³⁶ In Palestinian Aramaic and Rabbinic Hebrew, the *vav* before *resh* is not restricted to the environments that induced the pharyngealized *resh* in Tiberian Hebrew, but it may be interpreted as evidence that a pharyngealized *resh* existed in the spoken language of the Jews of Palestine in the pre-Islamic period.

In the passage from his commentary on the *Sefer Yeṣira* that is cited above, Saadya states that the Tiberians have a double *resh* in their reading of the Bible, whereas the Iraqis (i.e. Babylonians) have it in their speech but not in their reading of the Bible.

Saadya does not specify which type of Tiberian *resh* resembles the *resh* in the Babylonian biblical reading tradition. *Sefer Yeṣira* classifies *resh* among the consonants pronounced at the front of the mouth 'between the teeth and with a resting tongue' According to Morag (1960, 233), this reflects the

¹³⁶ For labialization associated with pharyngealized consonants in modern spoken Arabic dialects see Bellem (2007) and for this feature in Neo-Aramaic see Khan (2016, vol. 1, 50).

 $^{^{137}}$ שינים ובלשון ישן 'between the teeth and with a resting tongue', בלשון ישו הבלשון 'with a resting and flat tongue' (ed. Gruenwald 1971, 147; ed. Hayman 2004, 92–98).

pronunciation of the Babylonian Jews. This was no doubt similar to the pronunciation of *resh* in the modern reading tradition of the Jews of Baghdad, in which it is realized as an alveolar trill (Morag 1977, 6). It is significant to note that in the modern Arabic dialect of the Jews of Baghdad there are two reflexes of Classical Arabic $r\bar{a}^{\circ}$, viz. (i) a back velar or uvular fricative ([γ], [κ]) or (ii) an alveolar trill [r] (Blanc 1964, 20–25; Mansour 1974, vol. 1, 25-31, 34-35). This two-fold pronunciation in the Arabic vernacular may be the double *resh* of the speech of the Iraqis described by Saadya. So, the comparison by Saadya of the Tiberian *resh* with the Iraqi vernacular *resh* can be taken as evidence supporting the proposal to identify the two types of Tiberian *resh* as apical and advanced uvular.

Saadya does not refer to the speech of the Tiberians, but other sources indicate that the distinction between different types of *resh* in the Tiberian reading is also found in the local vernacular speech. The author of one extant Masoretic Treatise datable to the tenth century states that he undertook fieldwork in the streets of Tiberias to verify his analysis of the *resh* of the Tiberian reading, on the grounds that *resh* had the same pronunciation in the local speech of the (Jewish) inhabitants of Tiberias:

'I spent a long time sitting in the squares of Tiberias and its streets listening to the speech of the common people, investigating the language and its principles, seeing whether anything that I had established was overturned or any of my opinions proved to be false, in what was uttered with regard to Hebrew and Aramaic, etc., that is the

language of the Targum, for it resembles Hebrew ... and it turned out to be correct and accurate.'138

The interpretation of this is not completely clear. The Aramaic mentioned by the author could have been vernacular Aramaic that was still spoken in Tiberias at the period. The Hebrew must have been the recitation of Hebrew liturgy or the occurrence of a 'Hebrew component' (Hebrew words and phrases) within vernacular speech. The reference to the two types of *resh* is found also in a Hebrew treatise in the corpus published by Baer and Strack,¹³⁹ in which, likewise, it is stated that this pronunciation existed in the conversational speech of the common people.

I.1.21. Sin שִׁין (שׁ)

Unvoiced alveolar sibilant [s]

This had the same pronunciation as *samekh* in the Tiberian tradition. It is not distinguished from *samekh* in $Hid\bar{a}yat\ al\ Q\bar{a}ri^{2}$. When it is stated in this work that 'The fourth place of articulation is the teeth, from which are heard four letters, namely יסצש (zayin, samekh, ṣade and shin),'¹⁴⁰ the letter v is intended to refer to both samekh and sin. As discussed in the

וכנת אטיל עלגלוס פי סוחאת טבריה ושוארעהא א[סת]מע כלאם אלסוקה ואלעאמה וכנת אטיל עלגה ואצול[הא] אנטר הל ינכסר שי ממא אצלת או ינפסד שי ממא טהר לי ואבחת ען עללגה ואצול[הא] אלעבראני ואלסריאני ואנואעה אע לגה אלתרגום וגירה פאנה (Allony 1973, 98–100).

¹³⁹ Baer and Strack (1879, §7).

¹⁴⁰ Long version, edition in vol. 2 of this book, §II.L.1.3.8.

Introduction (§I.0.8.), the written letter *sin* was considered to have *samekh* as its *qere*.

In the Karaite transcriptions, the diacritical dot of Hebrew *sin* is sometimes written over the left side of Arabic *sīn* when it transcribes *samekh*, e.g.

```
בייגג וֹלְיּלְ (BL Or 2551 fol. 10r, 8 | L [BHS]: קְּסִידֵידָּ Psa. 52.11 'your saints')

(BL Or 2551 fol. 13v, 7 | L [BHS]: מְסְתַּתְּר Psa. 54.2 'he who hides')

(BL Or 2539 MS A, fol. 65r, 3 | L [BHS]: בַּיִּלֶּסֶד Gen. 21.23 'like the kindness')
```

As remarked in the Introduction (§I.0.8.), *samekh* and *sin* sometimes interchange in the same word or root in the fixed orthography of the Masoretic Text, e.g.

Ezra 4.5: יְסֹכְרֶים 'and they hire' vs. 2 Chron. 24.12 שֹכְרִים '

In the biblical manuscripts from Qumran, there are many cases of *sin* occurring in place of Masoretic *samekh* and vice versa, which is additional evidence that the equivalence in pronunciation existed already in the Second Temple Period, e.g. ¹⁴¹

פשח (4Q136 f1.8 | L [BHS]: פַּסָה Exod. 12.48 'Passover')

¹⁴¹ Data supplied by Aaron Hornkohl.

ושרתם (XHev/Se5 f1.14 | L [BHS]: וְסַרְהֶּׁם Deut. 11.16 'and you [mpl] will turn away')

שעפי הסלעים (1QIsa 47.4 | L [BHS]: סְעֵפֵּי הַסְּלָעִים Isa. 57.5 (the clefts of the rocks')

ישד ארץ (4Q93 1.11 | L [BHS]: יַסָד־אָּרֶץ Psa. 104.5 'he established the earth')

סדהו (4Q134 f1.26 | L [BHS]: שָׁבֵּהוּ Deut. 5.21 'his field')

ולחסוף (1QIsaa 24.23 | L [BHS]: וְלַחְשָׂף Isa. 30.14 'and to scoop')

סאי (1QIsa^a 41.16 | L [BHS]: שָׁאֵי Isa. 49.18 'lift up [fs]!')

Ibn Janāḥ (Spain, eleventh century) states that the *dagesh* in the *sin* of מָשֶּׁבְּוֹת 'herbage' (Prov. 27.25) has the purpose of ensuring that it is not interchanged with *zayin*. This suggests that *sin* in contact with voiced consonants was susceptible of being read as voiced.

In some medieval Muslim sources, *sin* is represented by *ṣād* [s^c] in the name יַשָּשִׁי (Schreiner 1886, 254). This apparently reflects its pharyngealization after the pharyngeal *cayin*.

The pharyngealization of *sin* in the environment of emphatic consonants is attested in some modern reading traditions, e.g.

Yemen

[wajjıs t sem]) (Morag 1963, 37-38 | L [BHS]: יַּשְּׁטְם Gen. 27.41 'and [Esau] hated')

¹⁴² Kitāb al-Luma^c (ed. Derenbourg 1886, 240), Schreiner (1886, 241).

I.1.22. SHIN שין (שׁ)

Unvoiced palato-alveolar fricative [ʃ]

According to the medieval sources, its place of articulation was the same as that of the sibilants zayin and samekh, namely the teeth. As was pointed out above in the section on zayin (§I.1.7.), this did not necessarily imply that the teeth were one of the primary articulators. It is described by Ibn Janāḥ as a 'spreading letter', which no doubt referred to its palatalized articulation. In the Karaite transcriptions, it is represented by Arabic $sh\bar{i}n$, which, according to the Arabic grammarians, was a palatal fricative [ç], a pre-palatal fricative [ç+] or an alveolopalatal [ε]. Tiberian shin was not primarily palatal, since it was not included by $Hid\bar{a}yat$ al- $Q\bar{a}ri$ among the letters that are pronounced with the middle of the tongue.

I.1.23. TAV (ת)

Tav with dagesh (n): unvoiced aspirated alveolar stop [th]

Tav without *dagesh* (\mathfrak{n}): unvoiced alveolar fricative [θ]

A *tav* without *dagesh* is frequently, but not regularly, marked by the *rafe* sign in the model Standard Tiberian codices.

¹⁴³ *Hidāyat al-Qāri*², Long version, edition in vol. 2 of this book, §II.L.1.3.8.; ed. Eldar (1980, fol. 10b, line 77). *Sefer Yeṣira* (ed. Gruenwald 1971, 147; ed. Hayman 2004, 92–98).

חרף אלתפשי (*Kitāb al-Luma*', ed. Derenbourg, 27).

¹⁴⁵ Roman (1983, 202, 218, 248).

In some manuscripts of $\it Hid\bar ayat\ al\ -Q\bar ari\ ^{\prime}$, the name of this letter is spelt תאו or תאו 146

According to *Hidāyat al-Qāri'*, *tav* was articulated with 'the end of the tongue and the flesh of the teeth', i.e. the gums or alveolar ridge. Likewise, Saadya describes the place of articulation of *tav* as being adjacent to the inside of the upper teeth. When the letter had *dagesh*, the tongue was pressed firmly against the gums. When it was without *dagesh*, the tongue was pressed lightly against the gums. Both forms of the letter were articulated in the same place according to the medieval sources. It appears to have been pronounced with the tip of the tongue rather than the blade (see the description of *dalet* §I.1.4.).

Hidāyat al-Qāri' describes the stop [th] as primary (^{3}a , 1) and the fricative [θ] as secondary (^{f}ar).

We know from Greek transcriptions that in the first half of the first millennium C.E. plosive *tav* was pronounced with aspiration.¹⁵⁰ In Greek transcriptions from the pre-Masoretic period, plosive *tav* is represented by Greek *theta*, which was an aspirated stop [t^h]. In Latin transcriptions from the pre-Masoretic

¹⁴⁶ E.g. short version, edition in vol. 2 of this book, §II.S.3.0., §5.1.

I.1.24. CONSONANT PHONEMES

The inventory of consonant phonemes in the Tiberian reading tradition can be reconstructed as follows:153

Phoneme	Allophones	Orthography	Comments
/?/	[3]	8	
/b/	[b]	a	
/v/	[v]	ے	See §I.1.25. below
/g/	[g]	ż	
\R\	[R]	۲	See §I.1.25. below
/d/	[d]	ন	
/ð/	[ð]	٦	See §I.1.25. below
/h/	[h]	ה	
/v/	[v], [w]	٦	There are variations in
			the realization of the al-
			lophones across differ-
			ent sub-traditions of
			reading (§I.1.6.).
/z/	[z]	Ť	
/ħ/	[ħ]	п	
/t ^s /	[t ^s]	υ	
/j/	[j], [ɟ]	,	The stop allophone [ɟ]
			occurs only when the
			consonant is gemi-
			nated.

 $^{^{\}rm 153}$ The inventory of consonant phonemes presented here corresponds to that proposed by Schramm (1964, 63) on the basis of the graphemes of

Tiberian Hebrew, although he did not have access to the original

phonetic realizations.

1-h /	r1_h1		
/k ^h /	[k ^h]	⊃, ₹	
/χ/	[χ]	ב, כ	See §I.1.25. below
/1/	[1]	ን	
/m/	[m]	ם, מ	
/n/	[n]	٦, ١	
/s/	[s]	שׁ, ס	These were equivalent
			in the oral reading tra-
			dition. The distinction
			in orthography is an ar-
			chaism (§I.0.8.).
/?/	[?]	ע	
/p ^h /	[p ^h]	Ð	
/p ^s /	[p ^c]	Ð	This is attested only in
			אַפַּדְנוֹ 'his palace' (Dan.
			11.45), where its occur-
			rence is not conditioned
			by the phonetic envi-
			ronment, so it should be
			identified as a phoneme
			(§I.1.17.).
/f/	[f]	១	See §I.1.25. below
/s ^s /	$[s^{\varsigma}], [z^{\varsigma}]$	Z.	For the voiced variant
			see §I.1.7.
/q/	[q]	ק	
/r/	[r̪], [rˤ]	٦	The two variant realiza-
			tions are conditioned
			by the phonetic envi-
			ronment and so should
			be identified as allo-
			phones (§I.1.20.).
	L	Ĭ	1 (3 1 11)

/ʃ/	[ʃ]	שׁ	
/th/	[t ^h]	Ā	
/θ/	[θ]	л	See §I.1.25. below

I.1.25. DISTRIBUTION OF THE VARIANTS OF בגדכפת

In general, the fricative variants of the בגדכפת letters (i.e. the forms written without a *dagesh* sign: [v], [в], [ð], [χ], [f] and [θ], respectively) occur after a vowel when the letter is not geminated, e.g. רָב ['גְּמּ:av] 'much' (Gen. 24.25), יִשְׁכְּבּוֹ [jiʃkʰaˈvuː] 'they will lie' (Isa. 43.17). In principle, therefore, the stop and fricative variants appear to be allophones conditioned by the environment. In many cases, however, the preceding vowel had been elided in some previous stage of the language, but the consonant nevertheless remained a fricative, e.g.

 $^{\circ}$ בְּּׁרְתְבּוֹ [baχɔθ'vo:] 'when he had written' (Jer. 45.1) < *bakutubō

מַלְבֵי [mal' χ e:] 'kings of' (Gen. 17.16) $< *malak\bar{e}$

In a few such cases, a plosive and a fricative are in free variation, e.g.

רְשְׁפֵי [ਸ਼iʃˈfeː] (Psa. 76.4), רְשְׁפֵּי [ਸ਼iʃˈpʰeː] (Cant. 8.6) 'flames'

The distribution of the plosive and fricative allophones, therefore, is not completely predictable from the phonetic context in Tiberian Hebrew. Consequently, the plosive and fricative variants of the letters should be distinguished in a synchronic phonological representation, e.g.

```
מְלְבֵי /malχē/ [mal'χe:] 'kings of' (Gen. 17.16)
ל בְּנִפְּל /binfol/ [bin'fo:ol] 'at the falling of' (Isa. 30.25)
```

In the corpus of the Hebrew Bible, however, there is no certain minimal pair arising from the phonemicization of the variants of the בגדכפת consonants, though such oppositions could hypothetically occur in Tiberian Hebrew. Such minimal pairs are found in Aramaic, where the בגדכפת consonants were likewise phonemicized (Khan 2005, 84–87).
